Mrs.V. Jebinsha Rani,
Assistant Professor,
Department of Management Studies.

BONAFIDE CERTIFICATE

This is to certify that this project report entitled **"A STUDY ON EMPLOYEE SATISFACTION IN FREIGHT FORWARDING AND WAREHOUSING OPERATIONS AT SASHA SHIPPING PRIVATE LIMITED, TUTICORIN"** is the bonafide work of **Mr. SHEEJAN BABU B** (Reg. No: 963324631103) done under my supervision and guidance. Certified further that to the best of my knowledge, the work reported here does not form part of any other project report or dissertation on the basis of which a degree or award was conferred to her on an earlier occasion or any other candidate.

Place: Palkulam
Date: 25.04.2026 **Signature of the Guide**

Head of the Department

Viva-Voice Examination held on: 25.04.2026

Internal Examiner **External Examiner**

SASHA SHIPPING PVT. LTD.

Date: 08 April 2026

Internship Completion Letter

This is to certify that **Mr. Sheejan Babu B**, a second-year MBA student specializing in Logistics and Supply Chain Management at Rohini College of Engineering & Technology, Palkulam, Kanyakumari, has successfully completed his internship at **SASHA Shipping Private Limited** from **08th December 2025 to 08th April 2026**.

During the course of his internship, he was exposed to various operational and administrative activities within our organization, particularly in the areas of shipping operations. He demonstrated a strong willingness to learn, was highly inquisitive, and showed dedication towards understanding the practical aspects of the subject. He actively participated in departmental activities and carried out the tasks assigned to him with sincerity and responsibility.

We found his conduct and performance to be satisfactory during the internship period.

We wish him all the best in his future academic and professional endeavors.

With Regards,

For SASHA SHIPPING PVT LTD

DIRECTOR

SASHA SHIPPING PRIVATE LIMITED

DECLARATION

I hereby declare that the project report entitled "**A STUDY ON EMPLOYEE SATISFACTION IN FREIGHT FORWARDING AND WAREHOUSING OPERATIONS AT SASHA SHIPPING PRIVATE LIMITED, TUTICORIN"** is submitted in partial fulfilment of the requirements for the award of the degree of Master of Business Administration, is a record of independent research work carried out by me under the guidance of **Mrs.V. Jebinsha Rani**, Assistant Professor, Department of Management Studies, **Rohini College of Engineering and Technology, Palkulam**. I further declare that this project report is the result of my own effort and has not been submitted earlier for the award of any other Degree/ Diploma or Associate ship by Anna University or any other University.

Place: Palkulam **SHEEJAN BAB U**

Date: 25.04.2026 (Reg. No: 963324631103)

ACKNOWLEDGEMENT

First and foremost, I thank Almighty God with hearts and immense pleasure for the grace in giving Knowledge, Wisdom, and Strength to take up this project and complete it in time.

I am privileged to extend my heart hound gratitude to our Chairman **Shri. K. Neela Marthandan**, Rohini College of Engineering & Technology for providing the platform to conduct an organizational study.

I express my sincere gratitude to our Pro Chairman **Dr. K. Neela Vishnu, MBA, Ph.D**, Rohini College of Engineering & Technology for giving me the opportunity to undertake this project.

I wish to convey my profuse thanks to our Managing Director **Dr. V.M. Blessy Geo, MSc., Ph.D**, Rohini College of Engineering & Technology.

I express my sincere thanks to our Principal, **Dr. R. Rajesh, ME, Ph.D**, Rohini College of Engineering & Technology who had given me official permission to undertake this project.

I extend my gratitude to our beloved Head of the Department of Management Studies **Dr. G. Prem Shankari, MBA, Ph.D**, Rohini College of Engineering & Technology for her valuable suggestion and encouragement throughout the project.

I am privileged to thank to my project guide **Mrs.V. Jebinsha Rani, MBA, Assistant Professor**, Rohini College of Engineering & Technology for her enlightened thoughts and remarkable guidance for my project.

I take this opportunity to express my sincere thanks to **Mr Shanmuga Sundaram & Mrs Vijaya Lakshmi, MD, Sasha Groups, Tuticorin** for giving permission to undertake this project and special thanks to my project mentor **Mr Avudaiyappan, General Manager, Sasha Groups, Tuticorin**

Finally, I wish to express my sincere thanks to my family and friends for their constant encouragement, support, help and valuable advice to make this project in the way to success.

ABSTRACT

This study examines the relationship between freight forwarding, warehousing operations, and employee satisfaction at **Sasha Shipping Private Limited, Tuticorin**. These functions are essential components of the logistics and supply chain industry, directly influencing service quality, operational efficiency, and customer satisfaction. However, their effectiveness largely depends on employee motivation, engagement, and overall job satisfaction. The main objective of the study is to assess employee satisfaction levels and identify key influencing factors such as working conditions, communication, management support, safety, workload, training, and career growth opportunities. The study also analyzes the impact of employee satisfaction on organizational performance. A descriptive research design was adopted using both primary and secondary data. Primary data was collected from **107** employees through a structured questionnaire, while secondary data was obtained from company records and relevant literature. Statistical tools such as percentage analysis, weighted average, chi-square test, correlation, and ANOVA were used for analysis. The findings indicate that employees are moderately satisfied, with strengths in warehouse facilities, equipment availability, and team coordination. However, improvements are needed in communication, workload management, training, and IT support. The study concludes that employee satisfaction plays a crucial role in improving productivity, service quality, and operational efficiency, while dissatisfaction may lead to reduced performance and higher employee turnover. Overall, the study emphasizes the importance of effective human resource practices, better working conditions, and strong communication systems to enhance both employee satisfaction and organizational success in the logistics sector.

CHAPTER I

CHAPTER I
INTRODUCTION

1.1 INTRODUCTION OF THE STUDY

Freight forwarding, warehousing, and employee satisfaction are deeply interconnected pillars that form the foundation of the logistics and supply chain industry, playing a crucial role in ensuring the smooth functioning of trade, commerce, and business operations on both domestic and international levels. The logistics industry has emerged as a critical enabler of globalization, facilitating the movement of goods, raw materials, and finished products across borders with efficiency and precision. Freight forwarding refers to the process of organizing shipments for individuals or corporations to get goods from the manufacturer or producer to a market, customer, or final point of distribution. It involves a range of services such as transportation planning, documentation, customs clearance, shipment tracking, insurance, cargo consolidation, and coordination with multiple carriers to ensure goods reach their destination on time and in good condition. Warehousing, in parallel, serves as a vital component of the supply chain, providing a safe and organized space for the storage, handling, and management of goods until they are ready to be distributed or consumed. Together, these two functions form the backbone of supply chain management by enabling businesses to maintain continuity in operations, meet customer demands efficiently, and sustain competitive advantage in a fast-changing global marketplace. However, while technological advancements and infrastructure development are often prioritized in this industry, the human factor—represented by the employees who plan, manage, and execute these operations—plays an equally, if not more, significant role in determining the success and sustainability of logistics processes. Employee satisfaction, therefore, becomes a vital aspect in freight forwarding and warehousing organizations as it directly impacts productivity, operational accuracy, customer service quality, and the overall growth of the enterprise.

The evolution of freight forwarding and warehousing has been remarkable over the last few decades, shaped by the demands of globalization, the rise of e-commerce, and rapid advancements in technology. Traditionally, freight forwarding was seen as a service primarily

concerned with transportation coordination, but modern freight forwarders now provide end-to-end solutions that include logistics consultancy, inventory management, customs brokerage, real-time tracking, risk assessment, and multimodal transport integration. Similarly, warehousing has transformed from being static storage spaces into dynamic operational hubs equipped with advanced technologies such as automated storage and retrieval systems (AS/RS), robotics, artificial intelligence (AI), Internet of Things (IoT), and big data analytics, all designed to optimize inventory flow, reduce lead times, and minimize operational costs. In such a competitive and technology-driven environment, the need for a skilled, motivated, and satisfied workforce becomes indispensable. Employees in this sector are expected to adapt to new systems, continuously upgrade their skills, work in high-pressure scenarios with tight deadlines, and ensure accuracy in every stage of operations. This creates an environment where job satisfaction is influenced by multiple factors including fair compensation, opportunities for growth and skill development, work-life balance, recognition, safety, and a positive organizational culture.

Employee satisfaction is not only a matter of individual well-being but also a strategic necessity for organizations operating in freight forwarding and warehousing. Satisfied employees are more likely to exhibit higher levels of engagement, motivation, and commitment, which in turn leads to improved operational performance, reduced errors, better customer relations, and enhanced service delivery. On the contrary, dissatisfaction often manifests in high turnover rates, absenteeism, low morale, and a decline in overall productivity, which can have serious repercussions in an industry where precision, timeliness, and reliability are paramount. For example, a delay in customs documentation due to negligence or disengagement of an employee can lead to shipment delays, penalties, and loss of client trust. Similarly, errors in warehousing operations such as incorrect labeling, inventory mismanagement, or unsafe handling can cause significant financial and reputational damage. Hence, organizations have increasingly recognized that investing in employee satisfaction is as critical as investing in infrastructure and technology. Factors such as proper training, fair wage policies, career advancement opportunities, effective communication, participative decision-making, and employee welfare programs play an instrumental role in fostering satisfaction within this sector.

In the broader context of logistics and supply chain management, freight forwarding and warehousing are often viewed as cost centers that need to be optimized for efficiency and profitability. However, this perspective is evolving as companies realize that operational excellence cannot be achieved solely through cost-cutting measures and technological upgrades. The human resource component is central to sustaining long-term success, as employees are the ones who execute the strategies, manage customer relations, and handle unforeseen disruptions such as shipment delays, customs bottlenecks, or inventory fluctuations.

The logistics industry is also highly susceptible to external pressures such as fluctuating fuel prices, trade regulations, global economic uncertainties, and changing consumer behavior, all of which demand flexibility and resilience from the workforce. In such a volatile environment, organizations that prioritize employee satisfaction are better equipped to handle challenges, as they benefit from a loyal and adaptive workforce willing to go the extra mile to ensure business continuity.

The significance of studying the relationship between freight forwarding, warehousing, and employee satisfaction lies in its potential to inform better decision-making for both managers and policymakers in the logistics industry. This study aims to explore the multifaceted dimensions of these three elements, analyzing how freight forwarding operations and warehousing practices impact employees' job satisfaction and how, in turn, a satisfied workforce contributes to the efficiency and growth of logistics organizations. For instance, efficient freight forwarding practices that minimize delays and simplify processes can reduce employee stress, while well-organized warehouses equipped with modern infrastructure can improve working conditions, reduce physical strain, and enhance job satisfaction. On the other hand, poorly managed operations often lead to long working hours, safety hazards, job insecurity, and burnout among employees, all of which contribute to dissatisfaction and attrition.

This study is also relevant in the current era where the logistics sector is witnessing increasing demand due to the rapid growth of e-commerce, globalization of supply chains, and the need for just-in-time (JIT) inventory systems. These developments have intensified the pressure on

freight forwarding and warehousing companies to perform with greater speed, accuracy, and cost-effectiveness, often leading to increased workload and higher expectations from employees. In such a context, employee satisfaction becomes a competitive differentiator, as companies with satisfied and well-trained employees are more likely to deliver consistent service quality, innovate processes, and build long-term relationships with clients. Moreover, the COVID-19 pandemic highlighted the critical role of logistics workers as essential service providers and brought to the forefront issues related to occupational health and safety, mental well-being, and job security in this sector. Post-pandemic, there is a growing emphasis on building resilient supply chains that not only focus on technological resilience but also on human capital resilience.

The research on this topic also seeks to shed light on specific challenges faced by employees in freight forwarding and warehousing. These may include excessive workload during peak seasons, irregular working hours due to international time zones, lack of adequate training in using new technologies, exposure to occupational hazards in warehouses, limited career advancement opportunities, and inadequate recognition for their contributions. Addressing these challenges requires a multi-pronged approach that includes policy reforms, better workforce planning, investment in training and development, improved workplace safety standards, and the creation of an inclusive organizational culture that values employee input and feedback. By understanding these dynamics, managers can implement strategies that not only enhance employee satisfaction but also translate into tangible improvements in operational metrics such as reduced turnaround times, lower error rates, higher customer satisfaction, and ultimately, improved profitability.

Another key aspect of this study is to examine the role of leadership and management practices in influencing employee satisfaction within freight forwarding and warehousing. Leadership styles that emphasize open communication, employee empowerment, recognition, and participative decision-making are more likely to foster a positive work environment compared to authoritarian or purely transactional management styles. Similarly, human resource management (HRM) practices such as performance appraisal systems, reward mechanisms, grievance redressal procedures, and employee engagement initiatives play a pivotal role in

shaping the overall satisfaction levels of employees. Organizations that align their HRM strategies with operational goals tend to achieve better results as they create a workforce that is not only skilled and efficient but also emotionally connected to the organizational mission.

The study also explores how technological advancements, while improving operational efficiency, have influenced employee roles and satisfaction. Automation, artificial intelligence, and digitalization have significantly reduced manual tasks in freight forwarding and warehousing, but they have also led to concerns such as job displacement, increased demand for technical skills, and constant pressure to adapt to new systems. Employees who are not provided with adequate training or support during these transitions may experience job insecurity and dissatisfaction, while those who are empowered with skill development opportunities often perceive these changes as career-enhancing. Thus, the relationship between technology adoption and employee satisfaction is complex and requires careful management.

In conclusion, the study on freight forwarding, warehousing, and employee satisfaction is not just an academic exercise but a practical exploration of how operational efficiency and human well-being intersect in one of the most vital sectors of the modern economy. As supply chains become more globalized and customer expectations continue to rise, companies cannot afford to overlook the human element in their pursuit of operational excellence. Satisfied employees are the backbone of efficient logistics systems, contributing to reduced costs, improved customer loyalty, and sustainable business growth. By examining the interdependencies between freight forwarding processes, warehousing operations, and employee satisfaction, this study aims to provide actionable insights that can help organizations build a more resilient, efficient, and employee-centric logistics framework.

1.2 INDUSTRY PROFILE

The logistics industry plays a vital role in enabling global trade, commerce, and economic development by managing the movement of goods, services, and information from origin to consumption. It encompasses several key functions such as transportation, warehousing, inventory management, packaging, material handling, and distribution. The industry can be

broadly divided into segments including inbound logistics (movement of raw materials), outbound logistics (distribution of finished goods), third-party logistics (3PL), fourth-party logistics (4PL), and e-commerce logistics, which has become increasingly significant with the rise in online retail activity.

The logistics market is composed of various stakeholders including shippers (like manufacturers and retailers), logistics service providers, freight forwarders, customs brokers, and technology vendors. Modes of transportation used in logistics include road, rail, air, and sea, with intermodal logistics combining two or more modes to improve efficiency. Road transport is flexible and widely used for short-haul movements, while rail is preferred for bulk commodities over long distances. Air transport is fast but expensive, ideal for high-value or time-sensitive cargo. Sea freight, on the other hand, is most economical for large shipments over long distances.

On a global scale, the logistics industry is highly competitive with key players such as DHL, UPS, FedEx, DB Schenker, Maersk, and Kuehne Nagel. Regional giants like Delhi very and Blue Dart in India, SF Express in China, and Yamato in Japan are also shaping their respective domestic markets. As of 2024, the global logistics market is valued at approximately $9.9 trillion and is expected to grow at a compound annual growth rate (CAGR) of 6–8% through 2030. The Asia-Pacific region leads growth due to rapid industrialization, infrastructure investment, and booming e-commerce. North America and Europe continue to maintain a strong presence due to their mature markets and integrated supply chain systems. Several trends are shaping the logistics industry today. The integration of technology is transforming operations, with Transportation Management Systems (TMS), Warehouse Management Systems (WMS), and Internet of Things (IoT) enabling real-time tracking, automation, and data analytics. Artificial intelligence and machine learning are increasingly used to forecast demand, optimize delivery routes, and manage supply chain risks. Meanwhile, e-commerce growth has driven demand for rapid fulfillment, last-mile delivery solutions, and urban warehousing. The industry is also under pressure to adopt sustainable practices, with companies investing in electric vehicles, green warehousing, and carbon-neutral operations.

Despite the growth, the logistics sector faces challenges such as rising fuel and transport costs, infrastructure limitations, labor shortages, and complexities in global trade regulations. The COVID-19 pandemic highlighted the importance of resilient supply chains, prompting companies to diversify suppliers and digitize their logistics networks. Cybersecurity risks and climate change-related disruptions are also becoming critical concerns. Regulatory compliance plays a significant role in logistics operations. International trade is governed by conventions such as the International Maritime Organization (IMO) rules and IATA standards for air freight. Customs procedures, INCOTERMS, and local laws affect how goods are shipped across borders. Additionally, environmental regulations aimed at reducing emissions are pushing logistics providers to rethink their operations.

Emerging technologies continue to redefine the future of logistics. Cloud computing enables real-time data sharing, blockchain offers transparency and tamper-proof records, and automation through robotics is revolutionizing warehouse operations. The future will likely see the growth of digital freight marketplaces, AI-powered logistics orchestration, smart logistics hubs, and greater investment in sustainable and resilient supply chains. Concepts such as elastic logistics the ability to dynamically scale operations based on demand are becoming mainstream. In conclusion, the logistics industry is an essential, fast-evolving, and highly integrated sector that underpins nearly every facet of economic activity. Its transformation is driven by digital innovation, shifting consumer expectations, sustainability mandates, and the need for agile and resilient supply chains. As the global economy continues to evolve, logistics will remain a cornerstone of connectivity and growth across all industries.

TYPES OF LOGISTICS

The logistics segment is often categorized into different types based on the flow and purpose of goods:

1. Inbound Logistics

Refers to the receipt of raw materials and goods from suppliers to a company. Activities include transportation, storage, and receiving.

2. Outbound Logistics

Involves delivering finished products to end customers or retailers. Includes packing, shipping, distribution, and delivery.

3. Third-Party Logistics (3PL)

A company outsources logistics operations (like warehousing, transport) to an external provider.

4. Fourth-Party Logistics (4PL)

A strategic partner that manages the entire supply chain using multiple 3PL providers.

Strategic Importance of the Industry

The logistics and supply chain sector are not just operational it's strategic at the higher level

Competitive Advantage: Efficient supply chains reduce delivery times and costs, making a company more competitive.

Customer Loyalty: Faster deliveries and better service improve customer satisfaction.

Crisis Management: Resilient supply chains help businesses survive disruptions (e.g., during natural disasters or pandemics).

Cost Control: Good logistics management can significantly reduce operating costs

Global Expansion: A strong logistics network enables businesses to expand to new markets easily.

Technologies usage in industry

Modern supply chains heavily rely on technology for efficiency, visibility, and control:

Enterprise Resource Planning (ERP): Integrates business processes like inventory, accounting, and order management.

Warehouse Management Systems (WMS): Optimize warehouse operations like picking, packing, and stock control

Transportation Management Systems (TMS): Plan, execute, and optimize the physical movement of goods.

Challenges Faced by the Logistics Industry

Despite its growth and advancements, the logistics industry had faced numerous challenges:

- **Infrastructure Limitations:** In developing regions, poor roads, congested ports, and limited rail networks had hindered smooth operations.
- **Rising Fuel Costs:** Volatile oil prices had significantly impacted transportation expenses.
- **Regulatory Barriers:** Trade restrictions, customs regulations, and tariffs had added complexities to cross-border logistics.
- **Labor Shortages:** Skilled labor shortages, particularly in trucking and warehousing, had constrained capacity.
- **Environmental Concerns:** Increasing pressure to adopt sustainable practices had required significant investment.
- **Technological Innovations in Logistics**

  Technological advancements had been a driving force behind the rapid evolution of the logistics industry.
- **Automation and Robotics:** Automated guided vehicles (AGVs), drones, and robotic sorting systems had reduced human intervention and improved operational efficiency.
- **Artificial Intelligence and Machine Learning:** AI had enabled predictive demand forecasting, route optimization, and dynamic pricing models.
- **Blockchain:** Blockchain technology had provided secure and transparent transaction records, reducing fraud and enhancing supply chain trust.
- **E-commerce Integration:** The rise of online shopping had accelerated the need for last-mile delivery innovations, including same-day and next-day shipping options.
- **Green Logistics:** Eco-friendly transport modes, electric vehicles, and carbon-neutral shipping programs had emerged to address environmental concerns.

1.3 COMPANY PROFILE

Sasha Shipping Private Limited, Tuticorin.

Sasha Shipping Private Limited is a professionally managed logistics and freight forwarding company that provides comprehensive and reliable transportation and logistics solutions to meet the diverse needs of customers involved in domestic and international trade. The company operates in the fast-growing logistics and supply chain sector, which plays a crucial role in global trade by facilitating the movement of goods from one country to another and from one place to another within the country. The company acts as an integrated logistics service provider offering end-to-end solutions across ocean freight, air freight, road transportation, customs clearance, cargo survey, container yard handling, and liner services through its associated group companies. By acting as a coordination hub that connects exporters, importers, transporters, customs authorities, shipping lines, container terminals, and surveyors, the company ensures that cargo moves smoothly from the point of origin to the final destination without delay or damage.

The history of Sasha Shipping Private Limited is closely connected with the development of logistics and freight forwarding services in port-based trade operations. The company was established with the objective of simplifying complex logistics procedures for exporters and

importers by providing reliable freight forwarding and customs clearance services. In the early stages, the company mainly focused on freight forwarding and documentation services, but as customer requirements increased, the company gradually expanded its services by collaborating with specialized service companies that handle customs clearance, transportation, cargo survey, yard operations, and liner services. This network-based operational structure helped the company to grow as an integrated logistics service provider where each associated company performs a specific logistics function while Sasha Shipping coordinates the entire logistics process. Through continuous service improvement, strong coordination, and customer satisfaction, the company has built a stable position in the logistics industry.

Sasha Shipping Private Limited primarily operates in port-based logistics environments where activities such as customs clearance, container handling, cargo inspection, vessel booking, and transportation take place. The company's operations are connected with ports, container terminals, transport operators, warehouses, and customer locations. The company coordinates cargo movement through different stages including booking, documentation, customs clearance, container stuffing, yard handling, vessel loading, shipment movement, destination clearance, and final delivery. This integrated logistics process requires proper planning, documentation accuracy, and coordination between multiple service providers. The company plays a central role in managing this coordination and ensuring that each logistics activity is completed on time and according to regulations.

One of the major strengths of Sasha Shipping Private Limited is its association with specialized logistics service companies that perform different logistics functions. Sasha Service Company operates as a Customs House Agent (CHA) and handles customs clearance procedures for both import and export cargo. Customs clearance is one of the most important stages in international logistics because cargo cannot be exported or imported without customs approval. The CHA prepares and submits documents such as Shipping Bill, Bill of Entry, packing list, commercial invoice, and other regulatory documents required by customs authorities. The CHA also coordinates with customs officials during cargo examination, duty assessment, and cargo clearance, ensuring that all customs regulations are followed and cargo is cleared without

delay. Transportation services are handled by Fourway Global Impex, which manages the movement of containers and cargo between ports, container yards, warehouses, and customer locations. Transportation is an important part of logistics because cargo must be moved safely and delivered on time. Fourway Global Impex handles container transportation, trailer movement, empty container pickup, cargo pickup from customer premises, and delivery after import clearance. The company manages transport scheduling, driver coordination, route planning, and delivery confirmation to ensure smooth cargo movement and timely delivery.

Cargo survey and inspection services are handled by Sasha Perfect Service, which provides survey services for export and import cargo. Survey services are important for checking the condition, quantity, weight, and packing of cargo before shipment and after arrival. The company conducts container inspection, cargo damage inspection, loading and unloading supervision, weight verification, and prepares survey reports. These survey reports are important for documentation purposes and also used for insurance claims in case of cargo damage or shortage.

Container yard services are provided by Indu Bharath Container Terminal (IBCT), which handles yard operations such as container storage, container stacking, container handling, empty container storage, and container movement within the yard using handling equipment like reach stackers and forklifts. Yard management is very important in port logistics because containers must be stored properly before loading onto vessels and after unloading from vessels. Proper yard planning and container positioning help in reducing delays and improving operational efficiency.

Liner services and freight forwarding coordination are handled by Faast Global Service, which manages vessel booking, freight rate negotiation, shipping line coordination, Bill of Lading processing, cargo tracking, and shipment scheduling. Freight forwarding is the core activity in international logistics because it involves planning shipment routes, booking cargo space with shipping lines, preparing shipping documents, and tracking shipments until delivery. The company handles both Full Container Load (FCL) and Less than Container Load (LCL) shipments and ensures that cargo is transported according to the shipping schedule.

The logistics process followed by Sasha Shipping Private Limited involves multiple stages and coordination between different service providers. The process begins when the customer confirms the shipment and provides cargo details such as cargo type, weight, destination, and delivery schedule. The freight forwarder arranges vessel booking and the transport company moves the cargo to the port or container yard. The surveyor inspects the cargo and ensures proper packing and loading. The Customs House Agent prepares and submits customs documents and obtains customs clearance. After customs clearance, the container is moved to the container yard where it is stored until vessel arrival. The container is then loaded onto the vessel and transported to the destination country. After arrival, import customs clearance is completed and the cargo is transported to the customer's location. This entire process requires proper documentation, coordination, and communication between all logistics service providers.

Sasha Shipping Private Limited offers a wide range of services including freight forwarding, customs clearance, documentation, cargo handling, transportation coordination, cargo survey, container yard handling, liner services, warehousing, packaging, distribution, and cargo tracking. The company focuses on providing reliable and timely services because delays in logistics can result in demurrage charges, detention charges, financial losses, and customer dissatisfaction. Therefore, the company emphasizes documentation accuracy, proper scheduling, cargo safety, and effective communication.

The company adopts modern technology to improve service quality and operational efficiency. Shipment tracking systems are used to monitor cargo movement and provide real-time updates to customers. Digital communication systems are used to coordinate between customers, shipping lines, transport operators, and customs authorities. The use of technology helps in reducing documentation errors, improving coordination, and increasing operational efficiency.

Customer satisfaction is one of the main objectives of Sasha Shipping Private Limited. The company follows a customer-centric approach by understanding customer requirements and providing customized logistics solutions. The company maintains regular communication with customers and provides shipment status updates, documentation support, and problem-solving

assistance whenever required. By maintaining service quality, reliability, and transparency, the company aims to build long-term relationships with customers. The organization is supported by experienced and skilled employees who have knowledge in logistics operations, customs procedures, documentation, transport coordination, and cargo handling. The employees play a major role in ensuring that logistics operations are carried out smoothly and efficiently. The company also focuses on maintaining ethical business practices and compliance with logistics and customs regulations to ensure smooth business operations.

The business model of the company is based on logistics coordination and service management rather than owning all physical assets such as ships, trucks, and container yards. The company collaborates with specialized logistics service providers and coordinates the entire logistics process. This asset-light business model helps the company reduce operational costs and focus more on service quality, customer service, and operational efficiency. The main objective of Sasha Shipping Private Limited is to provide integrated logistics solutions covering the entire supply chain from origin to destination. The vision of the company is to become a leading logistics and freight forwarding company by providing reliable, efficient, and cost-effective logistics services. The mission of the company is to provide high-quality logistics services through professional management, modern technology, and customer-focused solutions while ensuring safety, reliability, and timely delivery of cargo.

Sasha Shipping Private Limited is an integrated logistics service provider that manages freight forwarding, customs clearance, transportation, cargo survey, container yard operations, and liner services through its associated companies Sasha Service Company (CHA), Fourway Global Impex (Transport), Sasha Perfect Service (Survey), Indu Bharath Container Terminal – IBCT (Yard Service), and Faast Global Service (Liner and Freight Forwarding). By coordinating all these logistics activities, the company ensures that cargo is transported safely, customs cleared without delay, and delivered to customers on time. The company plays an important role in supporting international trade and logistics operations by providing reliable and efficient logistics services to exporters and importers

1.4 ABOUT THE TOPIC

The present study focuses on employee satisfaction in freight forwarding and warehousing operations, with special reference to Sasha Shipping Private Limited. Freight forwarding and warehousing are two critical components of the logistics and supply chain industry, which play a vital role in ensuring the smooth movement, storage, and delivery of goods across domestic and international markets. As global trade and e-commerce continue to expand, the efficiency of logistics operations has become increasingly important for business success.

Freight forwarding involves the coordination of transportation, documentation, customs clearance, and shipment tracking, while warehousing deals with the storage, handling, and management of goods. Both functions require high levels of accuracy, coordination, and timely execution. However, the effectiveness of these operations largely depends on the performance and satisfaction of employees who manage these activities.

Employee satisfaction is a key factor that influences productivity, service quality, and overall organizational performance. In the logistics sector, employees often work under pressure, handling time-sensitive tasks, complex documentation, and operational challenges. Factors such as working conditions, communication, management support, training, safety measures, compensation, and career growth opportunities significantly impact their level of satisfaction.

This study aims to analyze how freight forwarding and warehousing operations affect employee satisfaction and how, in turn, employee satisfaction contributes to operational efficiency. Understanding this relationship helps organizations identify problem areas, improve working conditions, and enhance overall service quality. By focusing on both operational and human aspects, the study provides valuable insights for building a more efficient, productive, and employee-friendly logistics environment.

.

CHAPTER II

CHAPTER II
REVIEW OF LITERATURE

2.1 INTRODUCTION

The freight forwarding and logistics industry plays a crucial role in global trade and supply chain management by ensuring the smooth and efficient movement of goods from origin to destination. With the rapid growth of e-commerce, digital technologies, and increasing environmental concerns, the logistics sector is undergoing significant changes. Many researchers have studied various areas such as supply chain optimization, green logistics, last-mile delivery, digital technologies, and transportation efficiency. Previous studies have identified major challenges in freight forwarding, including high transportation costs, infrastructure limitations, coordination issues among stakeholders, and environmental impact. At the same time, the adoption of technologies such as Artificial Intelligence (AI), Blockchain, Internet of Things (IoT), and automation is improving logistics operations and supply chain performance. Therefore, this review of literature examines previous research studies related to freight forwarding, logistics, and supply chain management to understand key findings and identify research gaps for the present study.

Rajesh et al. (2023) studied the challenges faced by freight forwarders in logistics, focusing on issues between freight forwarders, carriers, and customers. Freight forwarders play a key role in managing shipments and supply chains. The research highlights problems faced by companies like Freightkare Multimodal Logistics Pvt. Ltd. and aims to identify solutions for smoother operations. This helps in understanding and improving the freight forwarding process.

Ambra et al. (2019) highlight the challenges of achieving sustainability in the transportation sector, emphasizing the need to better utilize existing assets. The paper explores how the concepts of the Physical Internet (PI) and synchromodal transport can improve freight transportation by shifting from road to rail and waterways. While these concepts have

developed separately, the study examines potential synergies and how they could complement each other. It identifies gaps in research and suggests future directions for integrating these models to enhance sustainability in freight logistics.

Rodrigue (2020) examines how e-commerce, particularly through Amazon, is reshaping the retail and freight sectors. The study highlights the shift towards distribution-based consumption, with e-commerce driving the need for specialized facilities, modes, and channels. It emphasizes the physical aspects of digitalization, showing how Amazon's distribution network follows a three-stage hierarchy: procurement and fulfillment, distribution, and last-mile delivery. This research underscores the evolving landscape of freight distribution in the e-commerce era.

Bosona (2020) studied the challenges and opportunities in last mile logistics (LML) for urban freight. The study showed that urban freight is growing due to factors like population growth, online shopping, and urban development. It identified key LML challenges such as technology, infrastructure, and high costs. The research also suggested sustainable delivery methods like cargo bikes and highlighted future research areas.

Hartley, J. L., & Sawaya, W. J. (2019). With rapid advances in digital technologies, supply chain professionals are exploring how to move forward, particularly by leveraging three promising tools: robotic process automation (RPA), artificial intelligence/machine learning (AI/ML), and blockchain. Based on interviews with leaders from 14 established manufacturing and service firms, the potential and future adoption of each technology are outlined. To prepare for effective implementation, organizations should appoint a visionary leader in supply chain technology; create a clear, strategic digital technology roadmap; and upgrade their foundational information systems to support these innovations.

Meng et al. (2025) focused on optimizing green warehousing and logistics to boost efficiency and reduce environmental impact. They developed a Deep Neural Network (DNN) model combined with Particle Swarm Optimization (PSO) for warehouse location and path planning. The model minimizes transport cost, energy use, and carbon emissions. Results showed it

improved cost and sustainability by 18% and 12% compared to traditional methods.

Moriarty and Honnery (2019) reviewed the role of hydrogen in transport, noting that early forecasts were overly optimistic. They suggest that while passenger transport may decline and shift away from internal combustion engines, freight transport will continue to grow. Hydrogen is not likely to be favored for passenger vehicles soon, but it holds strong potential for heavy freight. Promoting hydrogen for freight early on could be beneficial, even before surplus renewable hydrogen becomes widely available.

Centobelli et al. (2020) examined how logistics service providers (LSPs) in Europe are adopting green practices and technologies to support the UN's 2030 Sustainable Development Goals (SDGs). With freight transport being a major source of emissions, the study emphasized the growing role of affordable and scalable solutions in reducing environmental impact. The paper also highlighted the importance of supportive policies in promoting sustainable practices. A cross-country analysis revealed varied strategies among LSPs in adopting green innovations across different European nations.

Le, Carrel, and Shah (2022) reviewed how the rise of e-commerce impacts personal travel behavior. Their analysis of 42 studies showed that online shopping often substitutes physical Shopping trips, mainly affecting trip frequency. However, other travel outcomes like mode choice and time use remain underexplored. The study highlights gaps in existing research and calls for improved data and methods to better understand e-commerce's role in sustainable urban planning.

Hoseini Shekarabi et al. (2019) developed an optimal lot-sizing model for complex supply chains with multiple products, wholesalers, and levels under warehouse and shortage constraints. The goal was to minimize total supply chain costs while meeting stochastic demand conditions. Using a mixed integer nonlinear programming (MINLP) model, the study applied advanced optimization techniques like outer-approximation and decomposition. Results showed that the proposed method effectively improves cost efficiency and inventory

management.

Yuliana, D., & Setyadi, K. (2019). The Director General of Air Transportation transferred oversight of the NSW-Airportnet system to the Soekarno Hatta Airport authority's handling committee, aiming to evaluate its deployment and warehouse perceptions. Using purposive sampling and techniques like CSI, Fish Bone Analysis, and the USG Method, the study revealed that NSW-Airportnet is currently nonfunctional. The main failure drivers include people, systems, and support, with root causes such as mismatched data formats, weak stakeholder collaboration, inactive infrastructure, and absent SOPs. Implementation conformity scored only 47.5%, and the Customer Satisfaction Index was a low 42.78%, indicating significant dissatisfaction.

Boysen, Schwerdfeger, and Weidinger (2018) explored a novel last-mile delivery method using truck-based autonomous robots in urban areas to reduce traffic congestion. Trucks carry both packages and delivery robots, which are deployed to deliver items to individual customers before returning to city depots. The study developed scheduling procedures to optimize truck routes and minimize late deliveries. Results showed this approach could outperform traditional truck-based home delivery in terms of efficiency and timeliness.

Evangelista, Santoro, and Thomas (2018) conducted a systematic review of literature on environmental sustainability in third-party logistics providers (3PLs) from 2000 to 2016. They analyzed five key areas: influencing factors, green actions and performance impact, ICT tools, energy efficiency in road transport, and shipper collaboration. The study found growing interest since 2008 but highlighted under-researched areas like ICT and performance metrics. It concluded with proposed research directions to address existing gaps in the field.

Hasan, Zhang, and Shi (2021) examined the shift of freight transport from road to inland water transport (IWT) in Bangladesh, focusing on the Dhaka–Chittagong corridor. The study identified key factors influencing modal shift, including cost, time, reliability, and environmental impact. Results showed IWT is more cost-effective than road transport, despite longer transit times. The paper suggests that enhancing infrastructure and service quality can

make IWT a more competitive and sustainable alternative, offering guidance for policymakers and service providers.

Dujak and Sajter (2018) explored the potential of blockchain technology in logistics and supply chains, noting its origins in cryptocurrency and its disruptive nature. While its full potential may be hindered by resistance from powerful institutions, blockchain offers secure, trustless, and transparent systems for information exchange. The study highlights current uses and future possibilities of blockchain and distributed ledger technologies in improving supply chain operations. It emphasizes blockchain's capacity to transform logistics by enhancing trust and data integrity.

Otto et al. (2018) conducted a comprehensive literature review on the use of unmanned aerial vehicles (UAVs) in civil applications. They highlighted UAVs' potential in areas like package delivery, agriculture, infrastructure monitoring, and disaster response. The study reviewed over 200 articles, focusing on optimization and operations planning approaches. It also identified key drone characteristics and suggested future research directions to improve UAV deployment in logistics and other fields.

Cano et al. (2019) proposed a genetic algorithm (GA) to optimize picker routing in multi-block warehouses, aiming to reduce travel distance. The GA incorporates survival, crossover, immigration, mutation, and a local search heuristic. Results showed the GA outperformed traditional methods, saving 13.9% more distance than the s-shape strategy and 23.3% more than aisle-by-aisle routing. The algorithm proved especially effective in larger warehouses with fewer picking locations.

Nozari et al. (2022) studied how AIoT can improve supply chains by combining IoT devices with artificial intelligence for smarter tracking and decision-making. They found that AIoT helps streamline operations but also brings challenges. The biggest issues are cybersecurity risks and lack of proper infrastructure. Their research highlights key areas to address for successful AIoT adoption in logistics.

Aini and Safira (2021) explored factors influencing Muslim consumers' willingness to pay for

Shihlin Taiwan Street Snacks in Indonesia. Concerns over halal compliance led the company to obtain certification, affecting consumer behavior. The study found that halal logos, animal slaughter practices, price awareness, food quality, and religious commitment all impact purchasing decisions. These insights help halal food companies and regulators build trust and improve standards.

Rodrigue (2020) offers a comprehensive overview of transport geography in the fifth edition of The Geography of Transport Systems. The book covers key topics such as freight and urban transportation, networks, terminals, and environmental impacts. It includes updated insights on e-commerce, information technology, pandemics, and climate change. Designed for students, it links transport systems to geography across global and local scales.

Cunanan et al. (2021) reviewed greenhouse gas emissions in freight transport, focusing on diesel, battery-electric, and hydrogen fuel cell heavy-duty vehicles (HDVs). They compared the technologies based on performance, cost, and environmental impact. While diesel HDVs remain dominant due to existing infrastructure and low cost, electric and hydrogen alternatives are emerging for cleaner transport. The study highlights future challenges and the slow but steady shift toward sustainable HDV solutions.

Qiao et al. (2019) introduced a cooperative edge caching scheme to enhance content delivery in vehicular networks using collaboration between macro-cell stations, roadside units, and smart vehicles. They modeled the system as a double time-scale Markov decision process to optimize content placement and delivery. A deep learning approach was used to solve the complex optimization problem efficiently. Results showed the proposed method reduced costs and latency while improving content delivery performance compared to traditional caching systems.

Harerimana, B., Forchuk, C., & O'Regan, T. (2019). The Director General of Air Transportation transferred the NSW-Airportnet system to the relevant authority at Soekarno-Hatta Airport, prompting an evaluation using purposive sampling, CSI, Fish Bone Analysis, and the USG Method ResearchGate. The study revealed the system is currently inoperative, hindered by issues spanning personnel, systems, and support including

unsynchronized data formats, inactive infrastructure, and absent SOPs ResearchGate. Implementation conformity stands at only 47.5%, and the Customer Satisfaction Index is a low 42.78%, reflecting widespread dissatisfaction ResearchGate. Let me know if you'd like this boiled down further or reshaped in another format.

Salmi, M., Partanen, J., Tuomi, J., Chekurov, S., Björkstrand, R., Huotilainen, E., ... & Mikkola, M. (2018). Digital spare parts store part data as digital files and use 3D printing with production often done close to the end user—for quicker access, lower storage costs, and reduced downtime. This approach is ideal for obsolete or complex parts, enabling flexible, on-demand production and eliminating the need for large physical inventories. Key challenges include identifying suitable parts, consolidating fragmented data, and ensuring full documentation of materials, tolerances, and post-processing requirements.

Ivanov, D., & Dolgui, A. (2019). This study proposes the Low-Certainty-Need (LCN**)** framework for managing supply chain disruptions, focusing on resilience even when environmental changes are unpredictable. It emphasizes structural variety, process flexibility, and parametric redundancy to minimize dependency on precise planning and ease recovery efforts . The LCN approach promotes efficiency through reduced need for uncertainty forecasting and coordination, supported by digital technologies for implementation.

2.3 RESEARCH GAP

Existing literature in the logistics and supply chain domain has largely concentrated on operational efficiency, technological advancements, and cost optimization, with comparatively limited emphasis on the human aspect, particularly employee satisfaction in freight forwarding and warehousing operations.

Most prior studies are conducted at a macro level, focusing on global logistics systems, sustainability, and digital transformation, while organization-specific and employee-centric analyses remain underexplored. In particular, there is a lack of integrated studies that examine the combined impact of freight forwarding processes and warehousing practices on employee

satisfaction within a single organizational framework.

Moreover, existing research does not adequately address how internal factors such as working conditions, management support, communication, coordination, and training influence employee satisfaction in day-to-day logistics operations. This gap is more evident in the context of port-based logistics companies in India, especially in regions like Tuticorin, where operational complexity and employee involvement are high.

Therefore, the present study aims to bridge this gap by providing an organization-specific analysis of the relationship between freight forwarding, warehousing operations, and employee satisfaction at Sasha Shipping Private Limited, thereby contributing practical insights for improving both employee well-being and operational performance.

CHAPTER III

CHAPTER III
RESEARCH METHODOLOGY

3.1 PROBLEM STATEMENT

Freight forwarding warehouses play a key role in the smooth functioning of logistics companies. At Sasha Shipping Private Limited in Tuticorin, warehouse employees are responsible for tasks like handling goods, managing records, and ensuring timely deliveries. However, employees may face challenges such as heavy workloads, poor communication, limited support, or lack of recognition, which can affect their job satisfaction and performance. Employee satisfaction is important because happy and motivated workers help improve service quality and business success. This study aims to understand how satisfied the warehouse employees are and what factors affect their satisfaction. Using questionnaires (primary data) and company records or reports (secondary data), the study will explore issues related to working conditions, motivation, and support. The goal is to find out what changes can be made to improve employee satisfaction and overall warehouse operations at Sasha Shipping Private Limited.

3.2 NEED OF THE STUDY

The logistics industry, particularly freight forwarding and warehousing, plays a crucial role in ensuring the smooth flow of goods and services in both domestic and international trade. As competition in this sector increases and customer expectations continue to rise, organizations must focus not only on operational efficiency but also on the well-being of their employees. Employee satisfaction has become an essential factor influencing productivity, service quality, and overall organizational performance.

In freight forwarding and warehousing operations, employees are required to handle time-sensitive tasks, complex documentation, coordination among multiple stakeholders, and

physically demanding activities. These challenging working conditions can lead to stress, dissatisfaction, and reduced efficiency if not properly managed. Therefore, it becomes necessary to understand the level of employee satisfaction and identify the factors that affect it. The need for this study arises from the growing importance of human resources in achieving operational excellence. While many organizations invest heavily in technology and infrastructure, limited attention is given to employee-related issues such as working conditions, communication, safety, training, and motivation. Ignoring these aspects can lead to high employee turnover, low morale, and decreased service quality.

This study helps in identifying the gaps in employee satisfaction within freight forwarding and warehousing operations at Sasha Shipping Private Limited. It provides insights into employee perceptions and highlights areas that require improvement. The findings of the study will assist management in formulating effective strategies to enhance employee satisfaction, improve operational efficiency, and ensure better service delivery. Ultimately, the study contributes to building a more productive and sustainable work environment in the logistics sector.

3.3 OBJECTIVES OF THE STUDY

- To assess the current level of employee satisfaction in the freight forwarding warehouse at Sasha Shipping Private Limited, Tuticorin.
- To identify key factors influencing job satisfaction, such as working conditions, management practices, and incentives.
- To examine the relationship between employee satisfaction and overall warehouse efficiency and performance.
- To recommend strategies for improving employee satisfaction and enhancing warehouse operations.

3.4 SCOPE OF THE STUDY

This study focuses on understanding the level of employee satisfaction within the freight forwarding warehouse operations at Sasha Shipping Private Limited in Tuticorin. It covers

factors such as working conditions, job roles, management support, motivation, and career growth opportunities. The study uses both primary data (through employee surveys) and secondary data (such as company policies and reports) to evaluate satisfaction levels. It aims to identify key areas of concern and suggest improvements. The scope is limited to the warehouse staff in the Tuticorin unit and does not include employees from other departments or locations.

3.5 PERIOD AND AREA OF THE STUDY

PERIOD OF THE STUDY

The period of the study refers to the time duration taken to complete the research project. The study on employee satisfaction in freight forwarding and warehousing at Sasha Shipping Private Limited was conducted over a period of four months. During this period, data was collected from the employees through a structured questionnaire, and the collected data was analyzed and interpreted. The four-month period included various stages of the research such as questionnaire design, data collection, data classification, data analysis, and interpretation of results. The study was conducted to understand the level of employee satisfaction and to identify the factors affecting employee satisfaction in freight forwarding and warehousing operations in the organization.

AREA OF THE STUDY

The sampling area of the study refers to the location where the data was collected. This study was conducted in Tuticorin. The respondents for the study were selected from employees working in freight forwarding and warehousing operations in Sasha Shipping Private Limited located in Tuticorin. And Tuticorin is an important port city with significant freight forwarding, shipping, and warehousing activities. The area was selected for the study because it provides access to employees who are directly involved in freight forwarding and warehouse operations. The data collected from this area helped in understanding the employee satisfaction level and operational efficiency in freight forwarding and warehousing activities.

3.6 RESEARCH DESIGN

The research design adopted for this study is descriptive in nature, as it aims to systematically explain the processes, challenges, and satisfaction levels of employees working in the freight forwarding warehouse at Sasha Shipping Private Limited, Tuticorin. The purpose of this study is to analyze warehouse operations and understand employee satisfaction, covering factors such as working conditions, workload, communication, safety, and career growth within the organization.

3.7 SAMPLING SIZE

The sampling size of the study consists of 107 respondents. The respondents were selected from employees working in freight forwarding and warehousing departments of Sasha Shipping Private Limited. The sample includes employees from different job roles such as freight forwarding executives, documentation staff, warehouse operations staff, and supervisors or managers.

The sample size of 107 respondents was considered adequate to represent the employee population in the organization. The data collected from the respondents was used to analyze employee satisfaction levels, operational efficiency, communication, coordination, safety, training and overall working conditions in the organization. The respondents were selected based on their availability and willingness to participate in the survey. The study uses primary data collected through a structured questionnaire distributed to the employees of the organization.

3.8 SAMPLING TECHNIQUE AND SAMPLING METHOD

Sampling Technique

The sampling technique used for this study is Convenience Sampling. Convenience sampling is a non-probability sampling method in which respondents are selected based on their

availability and willingness to participate in the survey. The employees who were available during the period of data collection and who were willing to respond were included in the sample.

This method was used because it is easy, time-saving, and cost-effective for collecting data from employees within the organization. The study focuses on employees working in freight forwarding and warehousing departments of Sasha Shipping Private Limited. The data collected through this sampling method was used to analyze employee satisfaction and operational efficiency in the organization.

Sampling Method

- The sampling method used in this study is non-probability convenience sampling.
- This method was chosen due to the ease of accessing employees at the selected warehouse site and the time-bound nature of the study. Participants were selected based on their availability and willingness to provide responses for the survey.

3.9 SOURCES OF DATA COLLECTION

Primary Data:

Primary data was collected through a structured questionnaire designed specifically for this study. The questionnaire included demographic questions, multiple-choice items, and Likert-scale statements to measure employee satisfaction, opinions on warehouse efficiency, safety standards, training, communication, and workload. Responses were collected directly from the employees at the company's Tuticorin warehouse.

Secondary Data:

Secondary data was gathered from internal company records, operational reports, employee manuals, and publicly available logistics reports. This data provided insights into warehouse practices, performance benchmarks, employee turnover rates, and best practices in the logistics industry, helping to support the analysis of employee satisfaction and operational challenges

3.10 TOOLS USED FOR ANALYSIS AND HYPOTHESIS

In this study, the data collected from the respondents were analyzed using appropriate statistical tools. Data analysis is the process of organizing, summarizing, and interpreting the collected data in order to draw meaningful conclusions. The statistical tools help to transform raw data into useful information for decision making. The following tools were used for the analysis and interpretation of data collected from employees working in freight forwarding and warehousing operations.

The tools used in this study are:

- Simple Percentage Analysis
- Weighted Average Method
- Chi-Square Test
- Correlation
- ANOVA (Analysis of Variance)

1. SIMPLE PERCENTAGE ANALYSIS

Simple percentage analysis is one of the basic statistical tools used for analyzing primary data. It is used to express the number of respondents in percentage form. This method helps to understand the distribution and proportion of respondents according to various categories such as gender, age, job role, and experience. Percentage analysis makes the data easy to understand and easy to compare.

In this study, percentage analysis is used to analyze the demographic profile of respondents and general opinion of employees regarding freight forwarding and warehousing operations.

Formula:

Percentage = (Number of Respondents / Total Number of Respondents) × 100

This method is used for the following variables like,

- Gender of respondents
- Age group of respondents
- Job role of respondents
- Length of service
- Overall satisfaction level
- Recommendation of company as a good workplace

Thus, percentage analysis helps in understanding the distribution of respondents and their opinions regarding employee satisfaction.

2. WEIGHTED AVERAGE METHOD

Weighted average analysis is used to measure the satisfaction level of employees towards various factors such as import process, export process, shipment tracking, warehouse facilities, communication, training, safety measures, salary, and overall job satisfaction.

In this method, different weights are assigned to different responses. For example, responses like Very Poor, Poor, Average, Good, and Excellent are assigned weights from 1 to 5 respectively. Similarly, Very Dissatisfied to Very Satisfied are assigned weights from 1 to 5. The weighted score is calculated by multiplying the frequency of respondents by the assigned weight. Then the total weighted score is divided by total number of respondents to find the weighted average.
This method helps to identify the overall satisfaction level of employees and to rank the factors affecting employee satisfaction.

Formula:
Weighted Average $= \Sigma (f \times w) / \Sigma f$

Where:

f = Frequency of respondents

w = Weight assigned to each response

Σ = Summation

Weight Assigned Table:

Response	**Weight**
Very Poor, Very Dissatisfied	1
Poor, Dissatisfied	2
Average, Neutral	3
Good, Satisfied	4
Excellent, Highly Satisfied	5

Thus, weighted average analysis helps in measuring the overall satisfaction level of employees in freight forwarding and warehousing operation

3. CHI-SQUARE TEST

Chi-square test is a statistical tool used to test whether there is a significant relationship between two categorical variables. It is used to compare the observed frequency and expected frequency. If there is a significant difference between observed and expected frequencies, then the relationship between variables is considered significant.

In this study, chi-square test is used to find the relationship between demographic variable (Age of the respondents) and overall satisfaction level.

Formula:

Chi-Square $(\chi^2) = \Sigma (O - E)^2 / E$

Where:

O - Observed frequency

E - Expected frequency

Hypothesis for Chi-Square Test:

H_0 (Null Hypothesis): There is no significant relationship between age of the respondents and employee overall satisfaction.

H_1 (Alternative Hypothesis): There is a significant relationship between age of the respondents and employee overall satisfaction.

Variables Used:

- Age of the respondents vs Employee Overall Satisfaction

Thus, chi-square test helps to identify whether age of the respondents is influence employee satisfaction.

4. CORRELATION

Correlation analysis is used to measure the degree of relationship between two variables. It indicates whether the relationship between variables is positive, negative, or no relationship. If the correlation value is positive, it means that when one variable increases, the other also increases. If the correlation value is negative, it means that when one variable increases, the other decreases.

In this study, correlation analysis is used to identify the relationship between salary satisfaction and employee overall satisfaction

Formula:

$r = [N\Sigma XY - (\Sigma X)(\Sigma Y)] \ / \ \sqrt{\{[N\Sigma X^2 - (\Sigma X)^2][N\Sigma Y^2 - (\Sigma Y)^2]\}}$

Where:

N = Number of observation

ΣXY = Sum of product of X and Y

ΣX = Sum of X values

ΣY = Sum of Y values

ΣX^2 = Sum of square of X values

ΣY^2 = Sum of square of Y values

Hypothesis for Correlation:

H_0: There is no significant relationship between salary satisfaction and employee overall satisfaction.

H_1: There is a significant relationship between salary satisfaction and employee overall satisfaction.

Thus, correlation analysis helps to understand how salary affects employee overall satisfaction.

5. ANOVA (ANALYSIS OF VARIANCE)

Analysis of Variance (ANOVA) is a statistical technique used to test whether there is a significant difference between the means of three or more groups. ANOVA compares the variation between the groups with the variation within the groups and calculates the F-ratio. If the calculated F value is greater than the table value, the null hypothesis is rejected and it is concluded that there is a significant difference between the groups.

In this study, ANOVA is used to test whether there is any significant difference in employee overall satisfaction with current job roles.

Formula:

F = Variance between the Groups / Variance within the Groups

Hypothesis for ANOVA:

H_0 (Null Hypothesis): There is no significant difference in employee overall satisfaction with current job role.

H_1 (Alternative Hypothesis): There is a significant difference in employee overall satisfaction with current job role.

Variables Used:

- Current Job Role vs Employee Overall Satisfaction

Thus, ANOVA helps to identify whether current job role of employees have different levels of overall satisfaction.

3.11 LIMITATIONS OF THE STUDY

The study has the following limitations:

- The study is limited to employees of Sasha Shipping Private Limited in Tuticorin, and therefore the findings cannot be generalized to other logistics companies or regions.
- The sample size consists of only 107 respondents, which may not fully represent the entire population of employees in the organization.
- The study uses convenience sampling, which may introduce bias as respondents were selected based on availability and willingness.
- The research focuses only on freight forwarding and warehouse employees, and does not include other departments such as finance, HR, or management.

- The data collected is based on employee perceptions and opinions, which may be subjective and influenced by personal factors.
- Some respondents may not have provided completely accurate or honest responses due to fear, hesitation, or personal bias.
- The study was conducted within a limited time period of four months, which restricts the depth of analysis.
- External factors such as workload variations, seasonal demand, and operational pressures during the study period may have influenced employee responses.
- The study mainly relies on questionnaire data and does not include in-depth interviews or qualitative analysis for deeper insights.
- Changes in company policies, technology, or management practices after the study period are not considered in this research.

3.12 STRUCTURE OF QUESTIONNAIRE

The questionnaire was designed to collect data on employee satisfaction in freight forwarding and warehousing operations at Sasha Shipping Private Limited. The questionnaire includes questions related to demographic details such as gender, age, job role, and length of service. This information helps in classifying respondents and analyzing satisfaction levels among different categories of employees.

The questionnaire also includes questions related to freight forwarding operations, warehouse facilities, communication, coordination, management support, compensation, safety, training, documentation, and overall job satisfaction. A five-point Likert scale was used to measure employee responses, ranging from Very Poor to Excellent, Never to Always, Very Dissatisfied to Very Satisfied, and Not at all true to Completely true.

The questionnaire includes multiple choice questions, Likert scale questions, yes/no questions, and one open-ended question for suggestions. The purpose of the questionnaire is to measure employee satisfaction and identify areas for improvement in freight forwarding and warehousing operations in the organization.

CHAPTER IV

CHAPTER IV

DATA ANALYSIS AND INTERPRETATION

4.1 SIMPLE PERCENTAGE ANALYSIS

TABLE 4.1.1

1. GENDER OF RESPONDENT

S.NO	Particulars	Frequency	Percentage
1	Female	38	35.5
2	Male	69	64.5
3	Other	_	_
4	Prefer not to say	_	_
	Total	107	100

INTERPRETATION

The table shows the gender distribution of the respondents who participated in the survey. Out of a total of 107 respondents, 69 respondents (64.5%) are male and 38 respondents (35.5%) are female. There were no respondents in the categories of "Other" and "Prefer not to say." This indicates that the majority of the respondents are male, and male respondents form nearly two-thirds of the total sample, while female respondents make up slightly more than one-third. Therefore, the survey results are more influenced by male respondents compared to female respondents, and this gender distribution should be considered while interpreting the overall findings of the study.

FIGURE 4.1.1

1. GENDER OF RESPONDENT

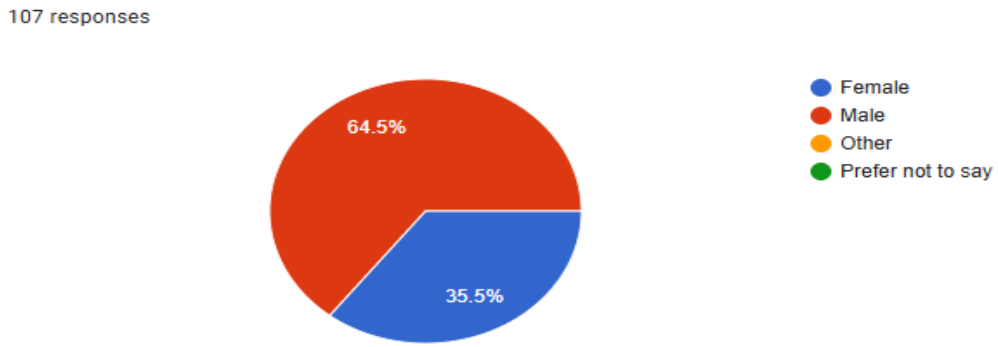

TABLE 4.1.2

2. AGE GROUP OF RESPONDENT

S.NO	Particulars	Frequency	Percentage
1	Below 25	19	17.8
2	25 – 34	33	30.8
3	35 – 44	41	38.3
4	45 and above	14	13.1
	Total	107	100

INTERPRETATION

The table shows the age distribution of the respondents who participated in the survey. Out of 107 respondents, 41 respondents (38.3%) belong to the age group of 35–44 years, which forms the majority. This is followed by 33 respondents (30.8%) in the age group of 25–34 years. Meanwhile, 19 respondents (17.8%) are below 25 years, and 14 respondents (13.1%) are 45 years and above, which is the smallest group. This indicates that most of the respondents are in the middle-age group (25–44 years), showing that the survey responses are mainly influenced by individuals in this age category.

FIGURE 4.1.2

2. AGE GROUP OF RESPONDENT

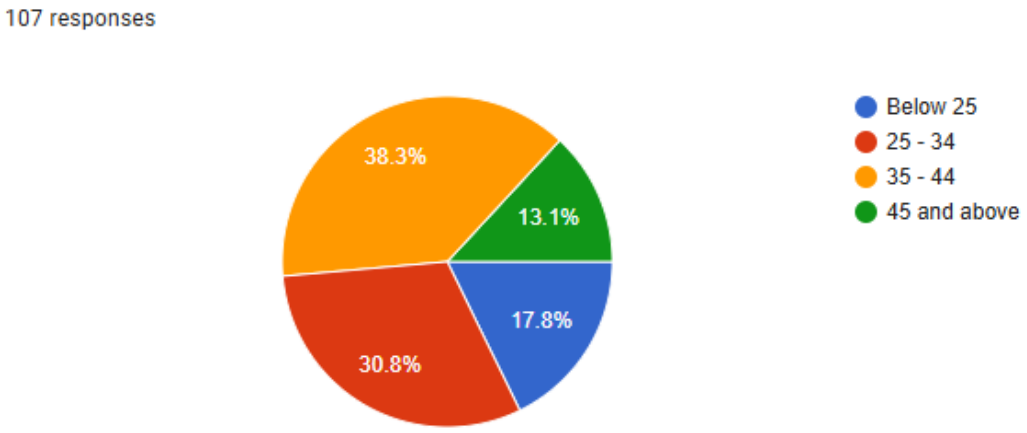

TABLE 4.1.3

3. CURRENT JOB ROLE

S.NO	Particulars	Frequency	Percentage
1	Freight forwarding executive	6	5.5
2	Documentation staff	16	15
3	Warehouse operations staff	46	43
4	Supervisor / Manager	25	23.4
5	Others	14	13.1
	Total	107	100

INTERPRETATION

The table shows the current job roles of the respondents in the survey. Out of 107 respondents, the majority, 46 respondents (43%), are working as warehouse operations staff. This is followed by 25 respondents (23.4%) who are working as supervisors or managers. Documentation staff account for 16 respondents (15%), while 14 respondents (13.1%) fall under other job roles. The least numbers of respondents, 6 (5.5%), are working as freight forwarding executives. This indicates that most of the respondents are involved in warehouse operations, and therefore the survey results are largely influenced by employees working in warehouse-related roles.

FIGURE 4.1.3

3. CURRENT JOB ROLE

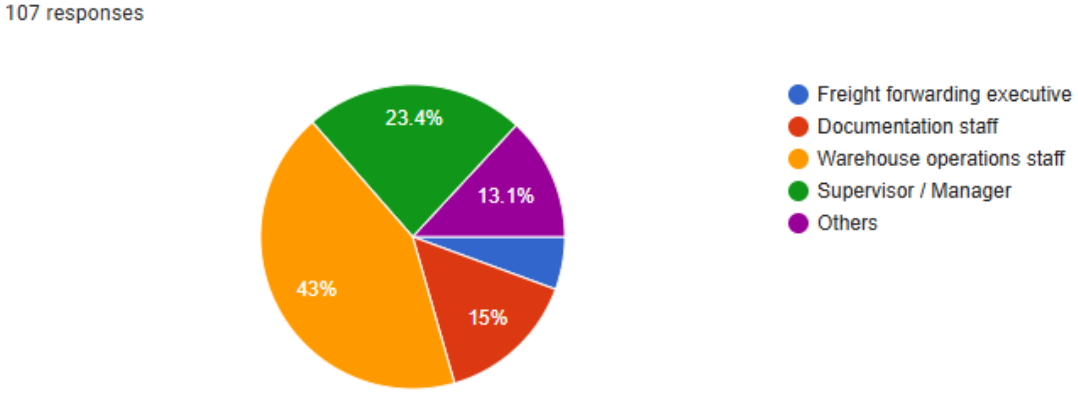

TABLE 4.1.4

4. LENGTH OF SERVICE

S.NO	Particulars	Frequency	Percentage
1	Less than 1 year	19	17.8
2	1 - 3 years	34	31.8
3	4 - 5 years	40	37.4
4	More than 5 years	14	13.1
	Total	107	100

INTERPRETATION

The table shows the length of service of the respondents in the organization. Out of 107 respondents, the majority, 40 respondents (37.4%), have 4–5 years of service. This is followed by 34 respondents (31.8%) who have 1–3 years of experience. Meanwhile, 19 respondents (17.8%) have less than 1 year of service, and 14 respondents (13.1%) have more than 5 years of service, which is the smallest group. This indicates that most of the respondents have moderate work experience ranging between 1 to 5 years, and therefore the survey responses are mainly influenced by employees with mid-level experience in the organization.

FIGURE 4.1.4

4. LENGTH OF SERVICE

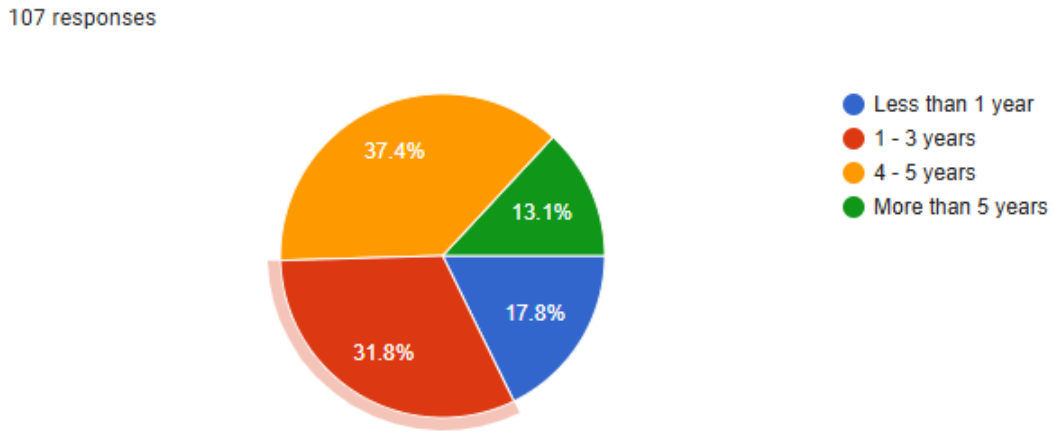

TABLE 4.1.5

5. EFFICIENCY OF IMPORT PROCESS

S.NO	Particulars	Frequency	Percentage
1	Very Poor	10	9.3
2	Poor	9	8.4
3	Average	36	33.6
4	Good	45	42.1
5	Excellent	7	6.5
	Total	107	100

INTERPRETATION

The table shows respondents' opinions on whether the import process in the company is efficient. Out of 107 respondents, the majority rated the import process as Good, with 45 respondents (42.1%). This is followed by 36 respondents (33.6%) who rated it as Average. Meanwhile, 10 respondents (9.3%) rated it as Very Poor, 9 respondents (8.4%) rated it as Poor, and only 7 respondents (6.5%) rated it as Excellent. This indicates that most respondents believe the import process is efficient at a moderate to good level, but there is still room for improvement as a noticeable percentage of respondents rated the process as poor or very poor.

FIGURE 4.1.5

5. EFFICIENCY OF IMPORT PROCESS

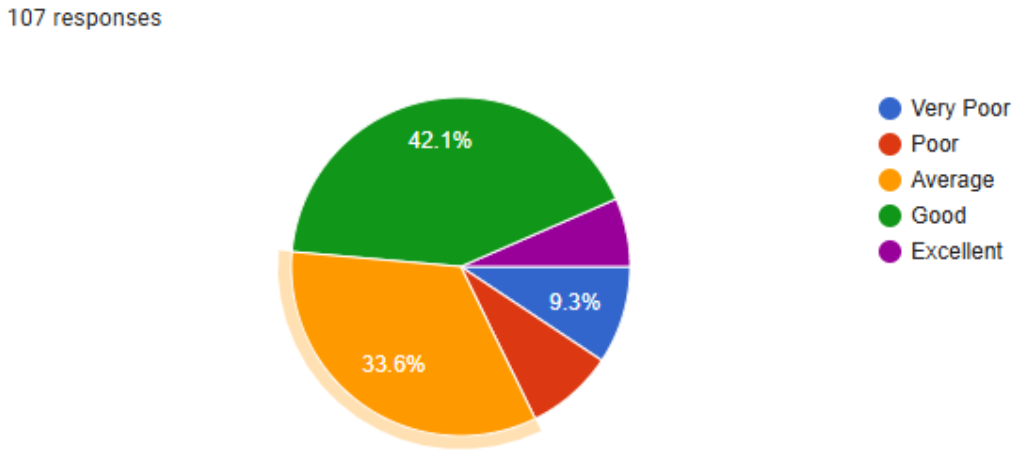

TABLE 4.1.6

6. TIMELINESS OF FREIGHT FORWARDING OPERATIONS

S.NO	Particulars	Frequency	Percentage
1	Very Poor	11	10.3
2	Poor	11	10.3
3	Average	29	27.1
4	Good	41	38.3
5	Excellent	15	14
	Total	107	100

INTERPRETATION

The table shows respondents' opinions on whether freight forwarding timelines are consistently met. Out of 107 respondents, the majority, 41 respondents (38.3%), rated the timelines as Good. This is followed by 29 respondents (27.1%) who rated them as Average. Additionally, 15 respondents (14%) rated the timelines as Excellent. However, 11 respondents (10.3%) rated the timelines as Poor and another 11 respondents (10.3%) rated them as Very Poor. This indicates that most respondents believe freight forwarding timelines are generally met, but a notable percentage of respondents feel that timelines are not consistently maintained, suggesting there is still room for improvement in meeting freight forwarding schedules.

FIGURE 4.1.16

6. TIMELINESS OF FREIGHT FORWARDING OPERATIONS

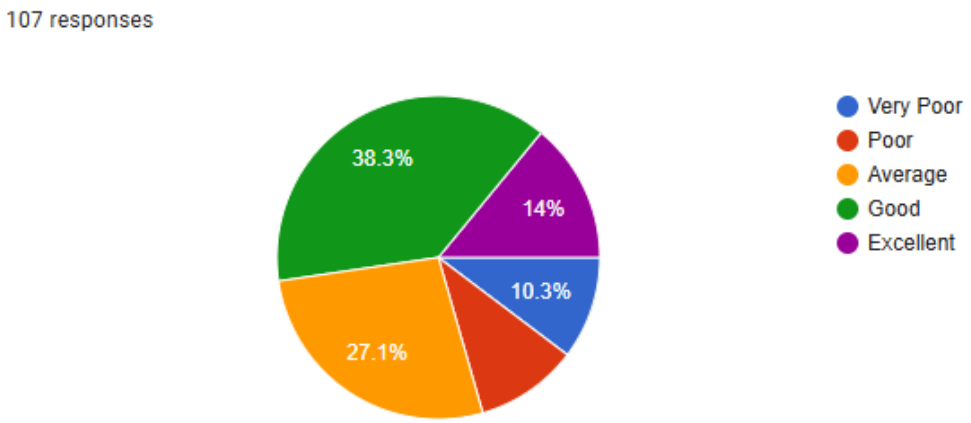

TABLE 4.1.7

7. ACCURACY OF REAL-TIME SHIPMENT TRACKING

S.NO	Particulars	Frequency	Percentage
1	Very Poor	14	13.1
2	Poor	17	15.9
3	Average	19	17.8
4	Good	38	35.5
5	Excellent	19	17.8
	Total	107	100

INTERPRETATION

The table shows respondents' opinions on whether real-time shipment tracking is accurate and reliable. Out of 107 respondents, the majority, 38 respondents (35.5%), rated the tracking system as Good. Additionally, 19 respondents (17.8%) rated it as Excellent, while another 19 respondents (17.8%) rated it as Average. However, 17 respondents (15.9%) rated it as Poor and 14 respondents (13.1%) rated it as Very Poor. This indicates that most respondents feel real-time shipment tracking is accurate and reliable to a good extent, but a significant number of respondents still experience issues, suggesting that improvements can be made to enhance tracking accuracy and reliability.

FIGURE 4.1.7

7. ACCURACY OF REAL-TIME SHIPMENT TRACKING

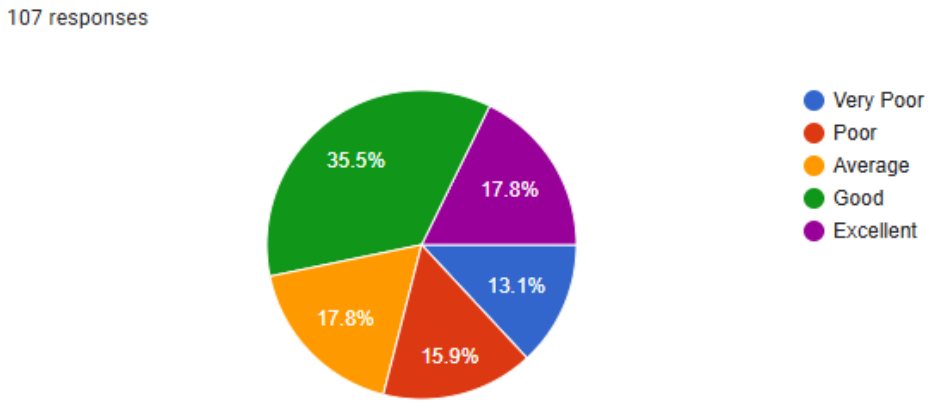

TABLE 4.1.8

8. EFFICIENCY OF FREIGHT HANDLING SYSTEM

S.NO	Particulars	Frequency	Percentage
1	Very Poor	13	12.1
2	Poor	10	9.3
3	Average	22	20.6
4	Good	44	41.1
5	Excellent	18	16.8
	Total	107	100

INTERPRETATION

The table shows respondents' opinions on whether the freight handling system operates efficiently. Out of 107 respondents, the majority, 44 respondents (41.1%), rated the system as Good. This is followed by 22 respondents (20.6%) who rated it as Average and 18 respondents (16.8%) who rated it as Excellent. However, 13 respondents (12.1%) rated the system as Very Poor and 10 respondents (9.3%) rated it as Poor. This indicates that most respondents believe the freight handling system operates efficiently, but a noticeable percentage of respondents are not fully satisfied, suggesting that there is still room for improvement in the freight handling process.

FIGURE 4.1.8

8. EFFICIENCY OF FREIGHT HANDLING SYSTEM

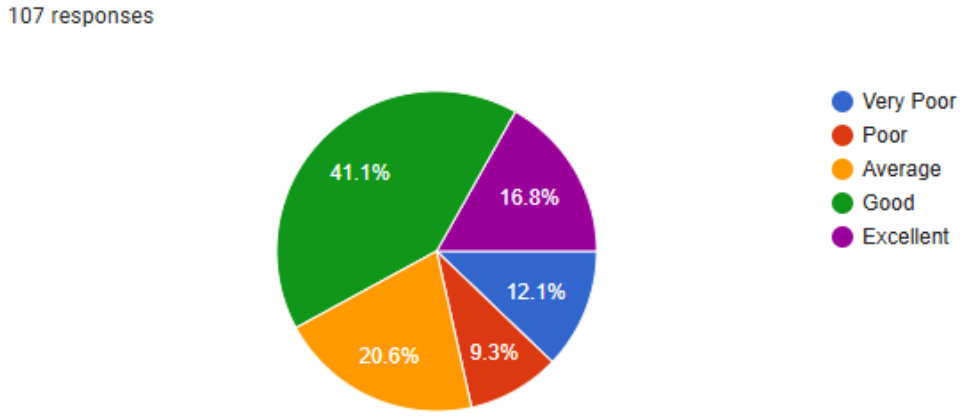

TABLE 4.1.9

9. CLARITY AND IMPLEMENTATION OF SOPs

S.NO	Particulars	Frequency	Percentage
1	Very Poor	14	13.1
2	Poor	10	9.3
3	Average	28	26.2
4	Good	42	39.3
5	Excellent	13	12.1
	Total	107	100

INTERPRETATION

The table shows respondents' opinions on whether Standard Operating Procedures (SOPs) are clearly defined and followed in the organization. Out of 107 respondents, the majority, 42 respondents (39.3%), rated the SOPs as Good. This is followed by 28 respondents (26.2%) who rated them as Average and 13 respondents (12.1%) who rated them as Excellent. However, 14 respondents (13.1%) rated the SOPs as Very Poor and 10 respondents (9.3%) rated them as Poor. This indicates that most respondents believe SOPs are clearly defined and followed to a reasonable extent, but a notable number of respondents feel that SOP implementation and clarity can still be improved within the organization.

FIGURE 4.1.9

9. CLARITY AND IMPLEMENTATION OF SOPs

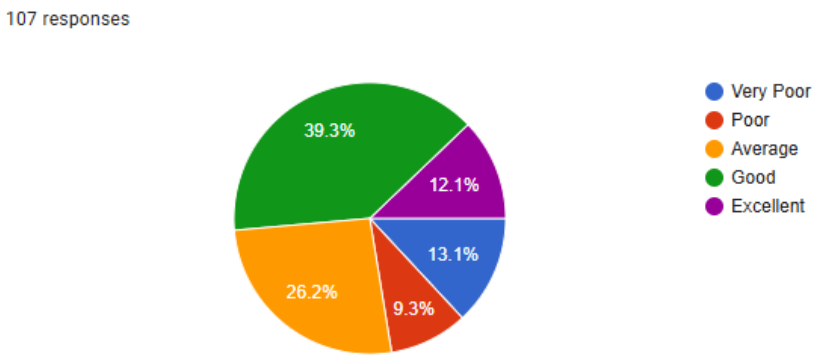

TABLE 4.1.10

10. ADEQUACY OF WAREHOUSE STORAGE FACILITIES

S.NO	Particulars	Frequency	Percentage
1	Very Poor	8	7.5
2	Poor	17	15.9
3	Average	15	14
4	Good	49	45.8
5	Excellent	18	16.8
	Total	107	100

INTERPRETATION

The table shows respondents' opinions on whether storage facilities are adequate for different types of cargo. Out of 107 respondents, the majority, 49 respondents (45.8%), rated the storage facilities as Good. This is followed by 18 respondents (16.8%) who rated them as Excellent, while 15 respondents (14%) rated them as Average. However, 17 respondents (15.9%) rated the storage facilities as Poor and 8 respondents (7.5%) rated them as Very Poor. This indicates that most respondents feel the storage facilities are adequate for different types of cargo, but a considerable number of respondents expressed dissatisfaction, suggesting that improvements in storage facilities may still be required.

FIGURE 4.1.10

10. ADEQUACY OF WAREHOUSE STORAGE FACILITIES

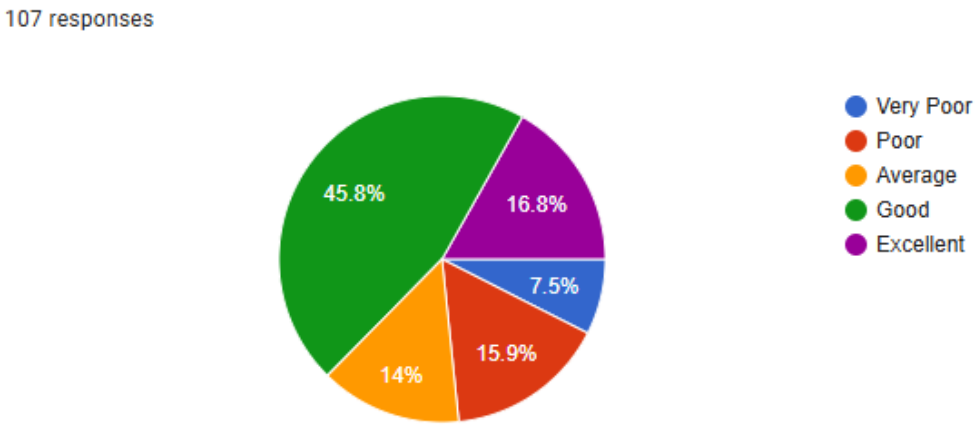

TABLE 4.1.11

11. COMPLIANCE WITH INTERNATIONAL FREIGHT REGULATIONS

S.NO	Particulars	Frequency	Percentage
1	Very Poor	9	8.4
2	Poor	12	11.2
3	Average	37	34.6
4	Good	33	30.8
5	Excellent	16	15
	Total	107	100

INTERPRETATION

The table shows respondents' opinions on whether the company effectively manages international freight regulations and compliance. Out of 107 respondents, the majority, 37 respondents (34.6%), rated the company's performance as Average. This is followed by 33 respondents (30.8%) who rated it as Good and 16 respondents (15%) who rated it as Excellent. However, 12 respondents (11.2%) rated it as Poor and 9 respondents (8.4%) rated it as Very Poor. This indicates that the company is managing international freight regulations and compliance at a moderate level, but there is still room for improvement to achieve a higher level of efficiency and compliance management.

FIGURE 4.1.11

11. COMPLIANCE WITH INTERNATIONAL FREIGHT REGULATIONS

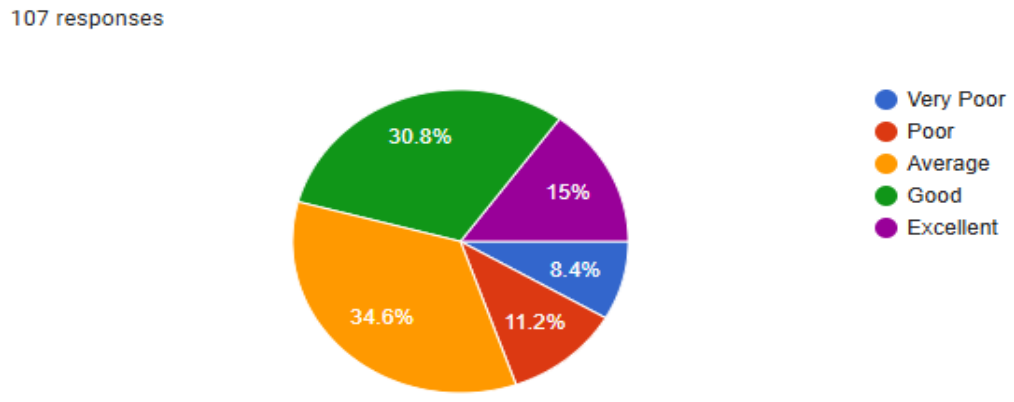

TABLE 4.1.12

12. COORDINATION BETWEEN FREIGHT AND WAREHOUSE TEAMS

S.NO	Particulars	Frequency	Percentage
1	Very Poor	8	7.5
2	Poor	16	15
3	Average	33	30.8
4	Good	36	33.6
5	Excellent	14	13.1
	Total	107	100

INTERPRETATION

The table shows respondents' opinions on whether coordination between freight forwarding and warehouse teams is effective. Out of 107 respondents, the majority, 36 respondents (33.6%), rated the coordination as Good. This is followed by 33 respondents (30.8%) who rated it as Average and 14 respondents (13.1%) who rated it as Excellent. However, 16 respondents (15%) rated the coordination as Poor and 8 respondents (7.5%) rated it as Very Poor. This indicates that coordination between freight forwarding and warehouse teams is generally effective, but a noticeable number of respondents feel that coordination can be improved for better operational efficiency and workflow.

FIGURE 4.1.12

12. COORDINATION BETWEEN FREIGHT AND WAREHOUSE TEAMS

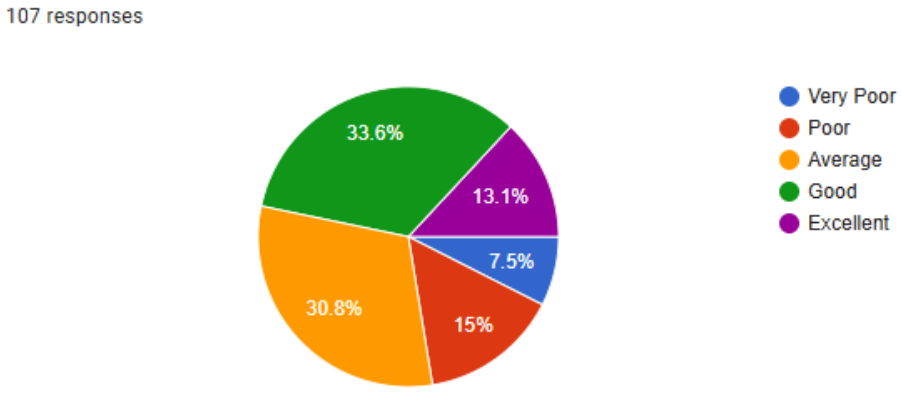

TABLE 4.1.13

13. AVAILABILITY AND MODERNITY OF WAREHOUSE EQUIPMENT

S.NO	Particulars	Frequency	Percentage
1	Very Poor	9	8.4
2	Poor	8	7.5
3	Average	21	19.6
4	Good	45	42.1
5	Excellent	24	22.4
	Total	107	100

INTERPRETATION

The table shows respondents' opinions on whether warehouse tools and equipment are modern and functional. Out of 107 respondents, the majority, 45 respondents (42.1%), rated the tools and equipment as Good. This is followed by 24 respondents (22.4%) who rated them as Excellent and 21 respondents (19.6%) who rated them as Average. However, 9 respondents (8.4%) rated the tools and equipment as Very Poor and 8 respondents (7.5%) rated them as Poor. This indicates that most respondents believe the warehouse tools and equipment are modern and functioning well, but a small percentage of respondents feel that improvements or upgrades may still be required.

FIGURE 4.1.13

13. AVAILABILITY AND MODERNITY OF WAREHOUSE EQUIPMENT

14. EFFECTIVENESS OF INTERNAL TEAM COMMUNICATION

S.NO	Particulars	Frequency	Percentage
1	Never	8	7.5
2	Rarely	14	13.1
3	Sometimes	21	19.6
4	Often	47	43.9
5	Always	17	15.9
	Total	107	100

INTERPRETATION

The table shows respondents' opinions on whether communication within their team is effective. Out of 107 respondents, the majority, 47 respondents (43.9%), stated that communication is Often effective. This is followed by 21 respondents (19.6%) who said Sometimes and 17 respondents (15.9%) who said Always. However, 14 respondents (13.1%) reported that communication is Rarely effective and 8 respondents (7.5%) said communication is Never effective. This indicates that communication within the team is generally effective, but there are still some communication gaps that need to be addressed to improve teamwork and coordination.

FIGURE 4.1.14

15. EFFECTIVENESS OF IT SYSTEMS FOR TRACKING OPERATIONS

S.NO	Particulars	Frequency	Percentage
1	Never	11	10.3
2	Rarely	10	9.3
3	Sometimes	26	24.3
4	Often	42	39.3
5	Always	18	16.8
	Total	107	100

INTERPERTATION:

The table shows respondents' opinions on whether IT systems adequately support shipment and inventory tracking. Out of 107 respondents, the majority, 42 respondents (39.3%), stated that IT systems Often support shipment and inventory tracking. This is followed by 26 respondents (24.3%) who said Sometimes and 18 respondents (16.8%) who said Always. However, 11 respondents (10.3%) reported that IT systems Never support tracking and 10 respondents (9.3%) said Rarely. This indicates that IT systems generally support shipment and inventory tracking effectively, but a noticeable number of respondents still face issues, suggesting that improvements in IT systems and technology support may be required.

FIGUER 4.1.15

16. TIMELINESS OF SHIPMENT STATUS UPDATES

S.NO	Particulars	Frequency	Percentage
1	Never	6	5.7
2	Rarely	15	14
3	Sometimes	24	22.4
4	Often	47	43.9
5	Always	15	14
	Total	107	100

INTERPRETATION

The table shows respondents' opinions on whether they receive timely updates regarding shipment status. Out of 107 respondents, the majority, 47 respondents (43.9%), stated that they Often receive timely updates. This is followed by 24 respondents (22.4%) who said Sometimes and 15 respondents (14%) who said Always. However, 15 respondents (14%) reported that they Rarely receive updates and 6 respondents (5.7%) said they Never receive timely updates. This indicates that most respondents receive timely shipment updates on a regular basis, but a noticeable number of respondents still experience delays in receiving updates, suggesting that communication regarding shipment status can be further improved.

FIGURE 4.1.16

17. INTERDEPARTMENTAL COORDINATION EFFICIENCY

S.NO	Particulars	Frequency	Percentage
1	Never	8	7.5
2	Rarely	11	10.3
3	Sometimes	21	19.6
4	Often	46	43
5	Always	21	19.6
	Total	107	100

INTERPRETATION

The table shows respondents' opinions on whether interdepartmental coordination in freight operations is effective. Out of 107 respondents, the majority, 46 respondents (43%), stated that coordination is Often effective. This is followed by 21 respondents (19.6%) who said Always and another 21 respondents (19.6%) who said Sometimes. However, 11 respondents (10.3%) reported that coordination is Rarely effective and 8 respondents (7.5%) said Never. This indicates that interdepartmental coordination in freight operations is generally effective, but there are still some coordination issues that need to be improved to ensure smoother freight operations.

FIGURE 4.1.17

18. SATISFACTION WITH JOB ROLE AND RESPONSIBILITIES

S.NO	Particulars	Frequency	Percentage
1	Very Dissatisfied	8	7.5
2	Dissatisfied	9	8.4
3	Neutral	27	25.2
4	Satisfied	44	41.1
5	Very Satisfied	19	17.8
	Total	107	100

INTERPRETATION

The table shows respondents' level of satisfaction with their job role and responsibilities. Out of 107 respondents, the majority, 44 respondents (41.1%), reported that they are Satisfied with their job role. This is followed by 27 respondents (25.2%) who are Neutral and 19 respondents (17.8%) who are Very Satisfied. However, 9 respondents (8.4%) reported that they are Dissatisfied and 8 respondents (7.5%) are Very Dissatisfied. This indicates that most respondents are satisfied with their job roles and responsibilities, but a small percentage of respondents are dissatisfied, suggesting that there is still scope for improvement in job roles and responsibility management.

FIGURE 4.1.18

18. SATISFACTION WITH JOB ROLE AND RESPONSIBILITIES

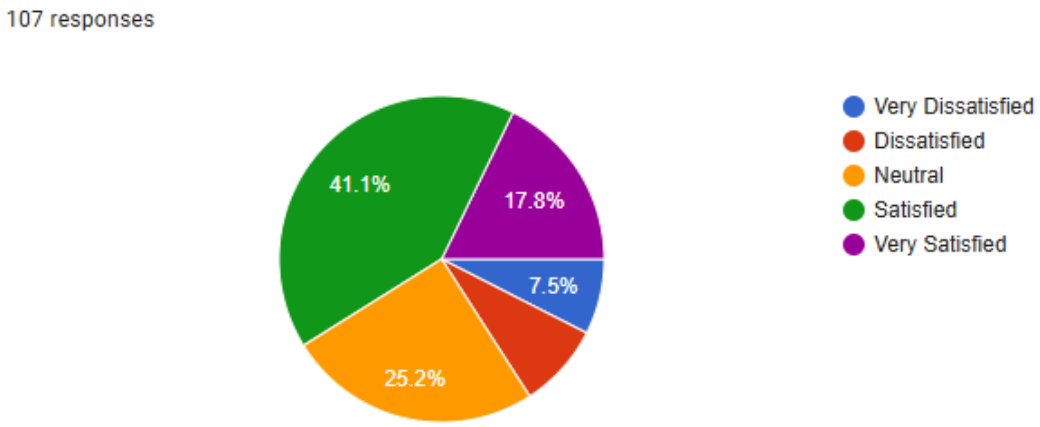

TABLE 4.1.19

19. MANAGEMENT COMMUNICATION AND TRANSPARENCY

S.NO	Particulars	Frequency	Percentage
1	Very Dissatisfied	10	9.3
2	Dissatisfied	6	5.7
3	Neutral	21	19.6
4	Satisfied	47	43.9
5	Very Satisfied	23	21.5
	Total	107	100

INTERPRETATION

The table shows respondents' opinions on whether management maintains good communication and transparency. Out of 107 respondents, the majority, 47 respondents (43.9%), reported that they are Satisfied with management communication and transparency. This is followed by 23 respondents (21.5%) who are Very Satisfied and 21 respondents (19.6%) who are Neutral. However, 10 respondents (9.3%) are Very Dissatisfied and 6 respondents (5.7%) are Dissatisfied. This indicates that most respondents feel that management maintains good communication and transparency, but a small percentage of respondents are not satisfied, suggesting that management communication can still be improved further.

FIGURE 4.1.19

19. MANAGEMENT COMMUNICATION AND TRANSPARENCY

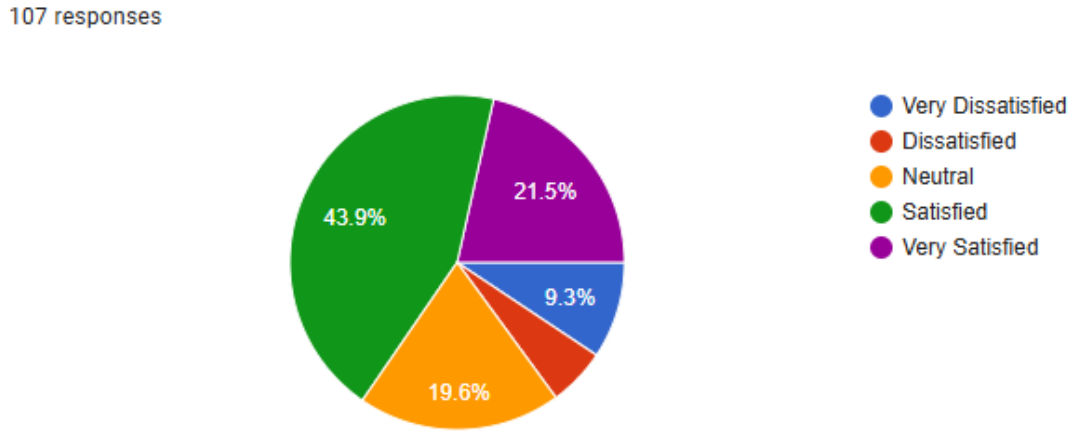

TABLE 4.1.20

20. IMPACT OF DOCUMENTATION ERRORS ON OPERATIONS

S.NO	Particulars	Frequency	Percentage
1	Very Dissatisfied	7	6.5
2	Dissatisfied	10	9.3
3	Neutral	23	21.5
4	Satisfied	48	44.9
5	Very Satisfied	19	17.8
	Total	107	100

INTERPRETATION

The table shows respondents' opinions on whether documentation errors rarely affect freight movement. Out of 107 respondents, the majority, 48 respondents (44.9%), are Satisfied with the statement, indicating that documentation errors do not frequently affect freight movement. This is followed by 23 respondents (21.5%) who are Neutral and 19 respondents (17.8%) who are Very Satisfied. However, 10 respondents (9.3%) are Dissatisfied and 7 respondents (6.5%) are Very Dissatisfied. This indicates that documentation errors generally do not have a major impact on freight movement, but a small percentage of respondents still face issues due to documentation errors, suggesting that further improvements in documentation accuracy and process control may be beneficial.

FIGURE 4.1.20

20. IMPACT OF DOCUMENTATION ERRORS ON OPERATIONS

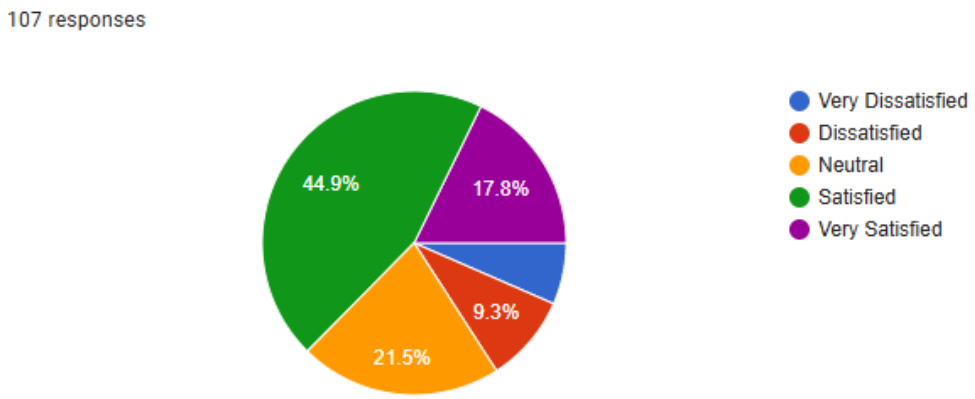

TABLE 4.1.21

21. SATISFACTION WITH COMPENSATION AND BENEFITS

S.NO	Particulars	Frequency	Percentage
1	Very Dissatisfied	5	4.7
2	Dissatisfied	11	10.3
3	Neutral	14	13.1
4	Satisfied	58	54.2
5	Very Satisfied	19	17.8
	Total	107	100

INTERPRETATION

The table shows respondents' opinions on whether they feel fairly compensated for their role and responsibilities. Out of 107 respondents, the majority, 58 respondents (54.2%), reported that they are Satisfied with their compensation. This is followed by 19 respondents (17.8%) who are Very Satisfied and 14 respondents (13.1%) who are Neutral. However, 11 respondents (10.3%) are Dissatisfied and 5 respondents (4.7%) are Very Dissatisfied. This indicates that most respondents feel they are fairly compensated for their work, but a small percentage of respondents are not satisfied with their compensation, suggesting that there is still some scope for improvement in compensation and benefits.

FIGURE 4.1.21

21. SATISFACTION WITH COMPENSATION AND BENEFITS

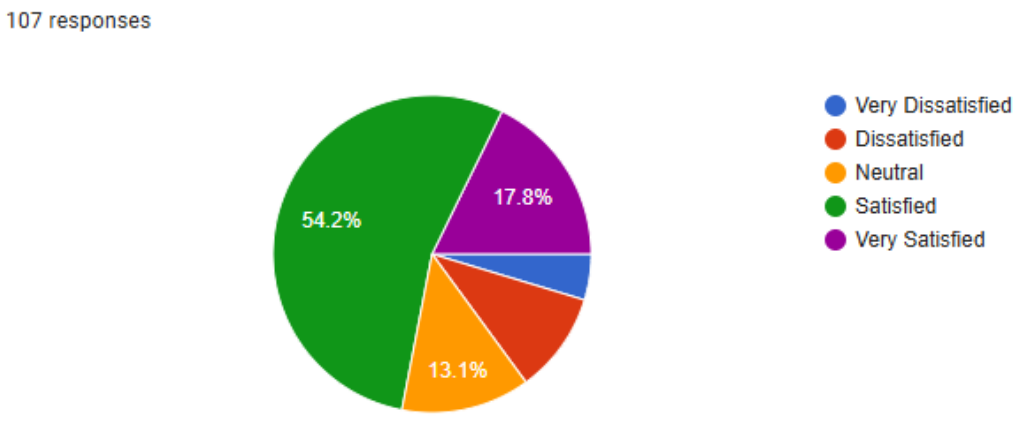

TABLE 4.1.22

22. EFFECTIVENESS OF WAREHOUSE SAFETY MEASURES

S.NO	Particulars	Frequency	Percentage
1	Very Dissatisfied	8	7.5
2	Dissatisfied	11	10.3
3	Neutral	21	19.6
4	Satisfied	43	40.2
5	Very Satisfied	24	22.4
	Total	107	100

INTERPRETATION

The table shows respondents' opinions on whether safety measures in the warehouse are effective. Out of 107 respondents, the majority, 43 respondents (40.2%), are Satisfied with the safety measures. This is followed by 24 respondents (22.4%) who are Very Satisfied and 21 respondents (19.6%) who are Neutral. However, 11 respondents (10.3%) are Dissatisfied and 8 respondents (7.5%) are Very Dissatisfied. This indicates that most respondents believe safety measures in the warehouse are effective, but a small percentage of respondents are not satisfied, suggesting that there is still room for improvement in warehouse safety measures.

FIGURE 4.1.22

22. EFFECTIVENESS OF WAREHOUSE SAFETY MEASURES

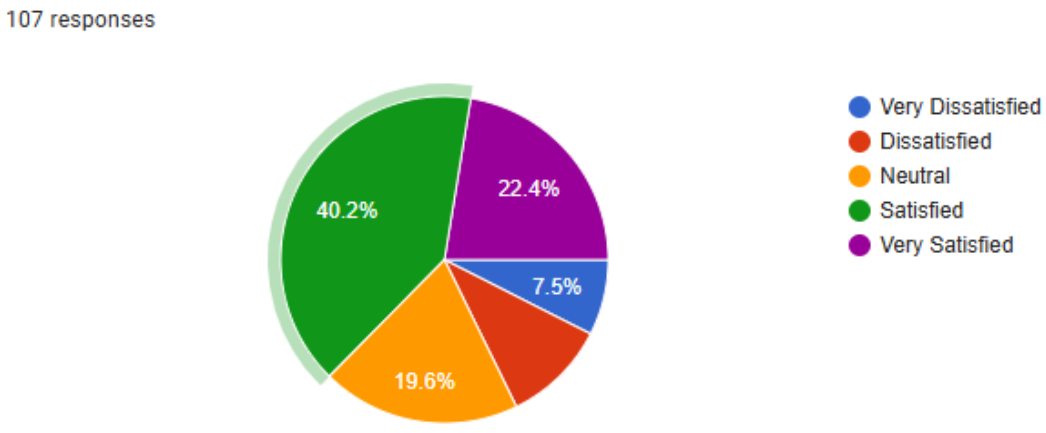

TABLE 4.1.23

23. RELIABILITY OF TRANSPORT PARTNERS

S.NO	Particulars	Frequency	Percentage
1	Very Dissatisfied	10	9.3
2	Dissatisfied	10	9.3
3	Neutral	20	18.7
4	Satisfied	43	40.2
5	Very Satisfied	24	22.4
	Total	107	100

INTERPRETATION

The table shows respondents' opinions on whether transport partners such as shipping lines and airlines are reliable. Out of 107 respondents, the majority, 43 respondents (40.2%), are Satisfied with the reliability of transport partners. This is followed by 24 respondents (22.4%) who are Very Satisfied and 20 respondents (18.7%) who are Neutral. However, 10 respondents (9.3%) are Dissatisfied and another 10 respondents (9.3%) are Very Dissatisfied. This indicates that most respondents feel transport partners are reliable, but a notable percentage of respondents are not satisfied, suggesting that the company may need to review or improve coordination and performance with transport partners.

FIGURE 4.1.23

23. RELIABILITY OF TRANSPORT PARTNERS

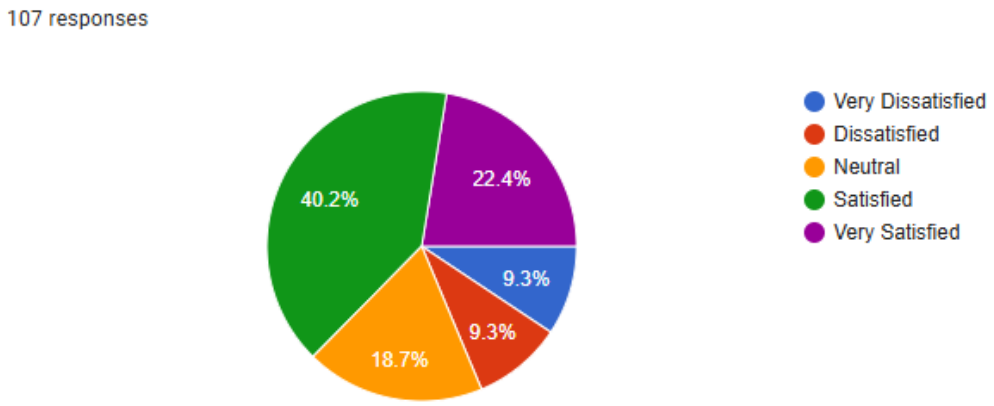

TABLE 4.1.24

24. EMPLOYEE RECOGNITION AND APPRECIATION

S.NO	Particulars	Frequency	Percentage
1	Very Dissatisfied	11	10.3
2	Dissatisfied	9	8.4
3	Neutral	23	21.5
4	Satisfied	46	43
5	Very Satisfied	18	16.8
	Total	107	100

INTERPRETATION

The table shows respondents' opinions on whether employees are recognized for their work and contributions. Out of 107 respondents, the majority, 46 respondents (43%), are Satisfied with the recognition they receive for their work. This is followed by 23 respondents (21.5%) who are Neutral and 18 respondents (16.8%) who are Very Satisfied. However, 11 respondents (10.3%) are Very Dissatisfied and 9 respondents (8.4%) are Dissatisfied. This indicates that most employees feel they are recognized for their work and contributions, but a notable percentage of respondents are not satisfied, suggesting that the company can further improve its employee recognition and reward systems.

FIGURE 4.1.24

24. EMPLOYEE RECOGNITION AND APPRECIATION

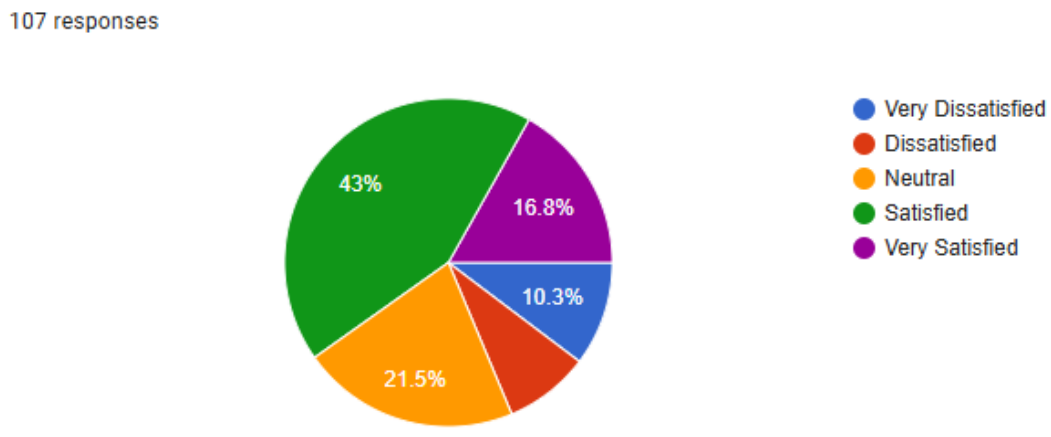

TABLE 4.1.25

25. ACHIEVABILITY OF FREIGHT FORWARDING TARGETS

S.NO	Particulars	Frequency	Percentage
1	Not at all true	7	6.6
2	Slightly true	13	12.1
3	Moderately true	18	16.8
4	Mostly true	43	40.2
5	Completely true	26	24.3
	Total	107	100

INTERPRETATION

The table shows respondents' opinions on whether freight forwarding targets are realistic and achievable. Out of 107 respondents, the majority, 43 respondents (40.2%), stated that the targets are Mostly true, meaning they believe the targets are realistic and achievable. This is followed by 26 respondents (24.3%) who said Completely true and 18 respondents (16.8%) who said Moderately true. However, 13 respondents (12.1%) felt the statement is Slightly true and 7 respondents (6.6%) said Not at all true. This indicates that most respondents believe freight forwarding targets are realistic and achievable, but a small percentage of respondents feel that the targets are difficult to achieve, suggesting that the company may need to review workload and target setting for better performance and employee satisfaction.

FIGURE 4.1.25

25. ACHIEVABILITY OF FREIGHT FORWARDING TARGETS

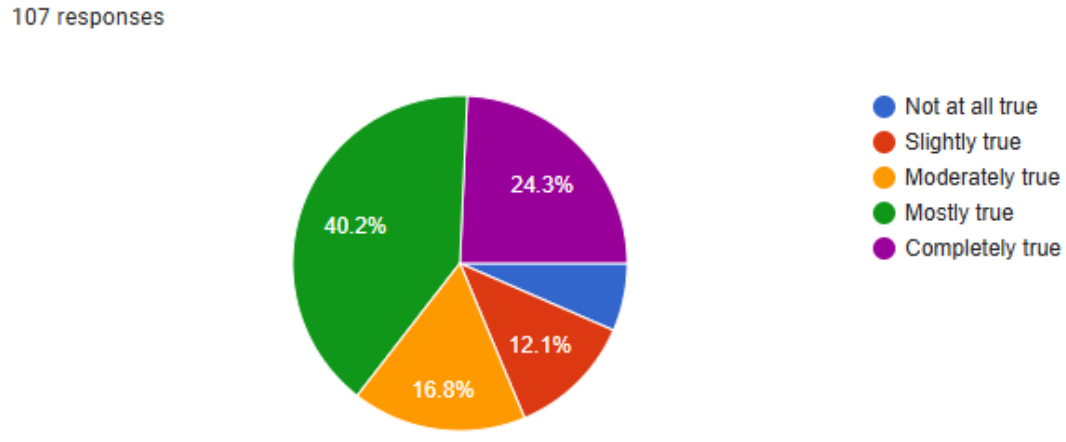

TABLE 4.1.26

26. TRANSPARENCY AND ACCURACY IN BILLING PROCESS

S.NO	Particulars	Frequency	Percentage
1	Not at all true	7	6.5
2	Slightly true	12	11.2
3	Moderately true	22	20.6
4	Mostly true	49	45.8
5	Completely true	17	15.9
	Total	107	100

INTERPRETATION

The table shows respondents' opinions on whether freight charges and billing processes are transparent and accurate. Out of 107 respondents, the majority, 49 respondents (45.8%), stated that the statement is Mostly true, indicating that freight charges and billing processes are generally transparent and accurate. This is followed by 22 respondents (20.6%) who said Moderately true and 17 respondents (15.9%) who said Completely true. However, 12 respondents (11.2%) felt the statement is Slightly true and 7 respondents (6.5%) said Not at all true. This indicates that most respondents believe the company maintains transparency and accuracy in freight charges and billing, but a small percentage of respondents still feel there are issues, suggesting that further improvements in billing transparency and accuracy may be beneficial.

FIGURE 4.1.26

26. TRANSPARENCY AND ACCURACY IN BILLING PROCESS

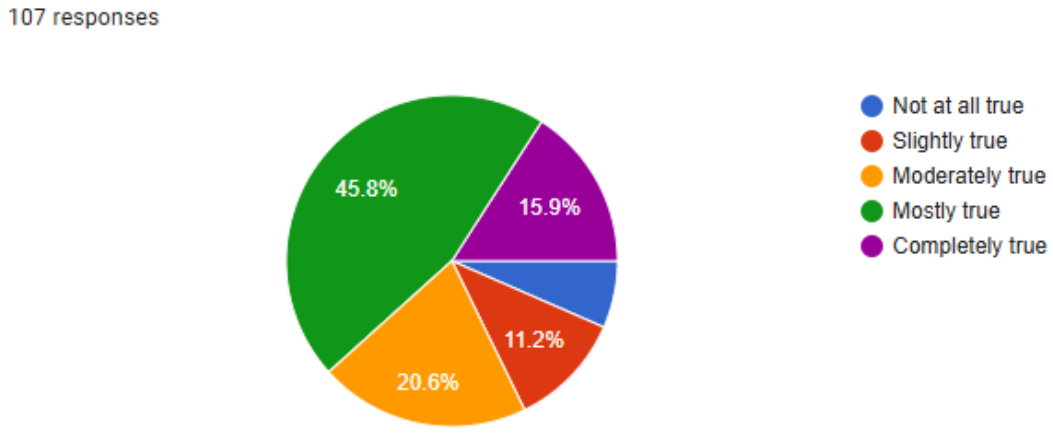

TABLE 4.1.27

27. ADEQUACY OF TRAINING ON FREIGHT REGULATIONS

S.NO	Particulars	Frequency	Percentage
1	Not at all true	13	12.1
2	Slightly true	10	9.3
3	Moderately true	25	23.4
4	Mostly true	45	42.1
5	Completely true	14	13.1
	Total	107	100

INTERPRETATION

The table shows respondents' opinions on whether the company provides adequate training on freight regulations and compliance. Out of 107 respondents, the majority, 45 respondents (42.1%), stated that the statement is Mostly true, indicating that the company provides adequate training on freight regulations and compliance. This is followed by 25 respondents (23.4%) who said Moderately true and 14 respondents (13.1%) who said Completely true. However, 13 respondents (12.1%) felt the statement is Not at all true and 10 respondents (9.3%) said Slightly true. This indicates that most respondents believe the company provides adequate training, but a noticeable percentage of respondents feel that training is not sufficient, suggesting that the company can further improve training programs related to freight regulations and compliance.

FIGURE 4.1.27

27. ADEQUACY OF TRAINING ON FREIGHT REGULATIONS

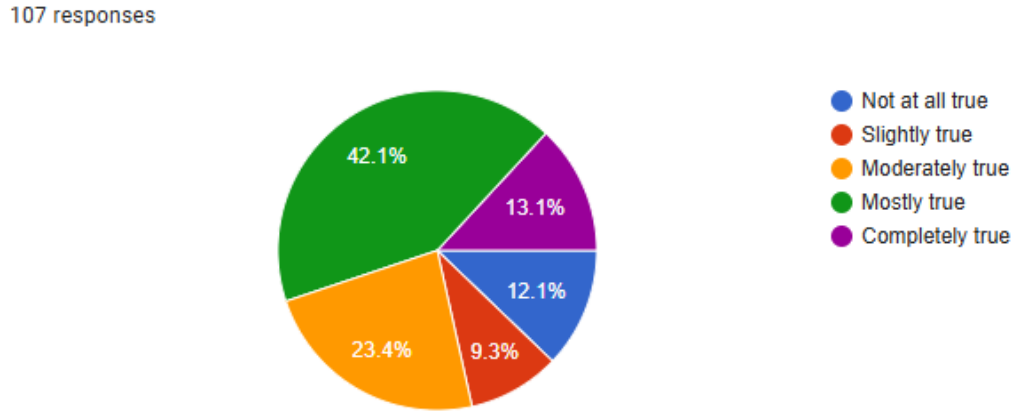

TABLE 4.1.28

28. CLARITY OF JOB RESPONSIBILITIES IN FREIGHT PROCESS

S.NO	Particulars	Frequency	Percentage
1	Not at all true	10	9.3
2	Slightly true	10	9.3
3	Moderately true	27	25.2
4	Mostly true	36	33.6
5	Slightly true	24	22.4
	Total	107	100

INTERPRETATION

The table shows respondents' opinions on whether their job responsibilities in the freight process are clearly defined. Out of 107 respondents, the majority, 36 respondents (33.6%), stated that the statement is Mostly true, indicating that job responsibilities are generally well defined. This is followed by 27 respondents (25.2%) who said Moderately true and 24 respondents (22.4%) who responded positively (interpreted as Completely true/Very true). However, 10 respondents (9.3%) felt the statement is Not at all true and another 10 respondents (9.3%) said Slightly true. This indicates that most respondents feel their job responsibilities are clearly defined, but a noticeable percentage of respondents still experience role clarity issues, suggesting that the company can further improve job role definition and communication of responsibilities.

FIGURE 4.1.28

28. CLARITY OF JOB RESPONSIBILITIES IN FREIGHT PROCESS

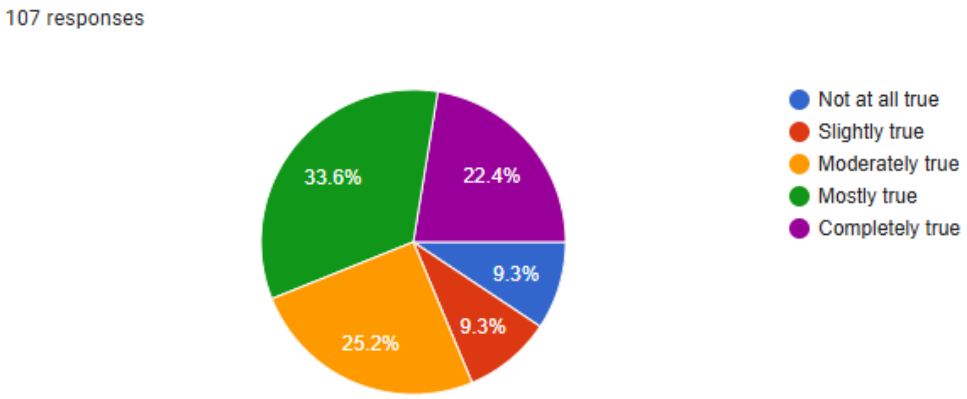

TABLE 4.1.29

29. ACCURACY AND TIMELINESS OF DOCUMENTATION PROCESS

S.NO	Particulars	Frequency	Percentage
1	Not at all true	12	11.2
2	Slightly true	11	10.3
3	Moderately true	25	23.4
4	Mostly true	44	41.1
5	Completely true	15	14
	Total	107	100

INTERPRETATION

The table shows respondents' opinions on whether export and import documentation are processed accurately and on time. Out of 107 respondents, the majority, 44 respondents (41.1%), stated that the statement is Mostly true, indicating that documentation is generally processed accurately and on time. This is followed by 25 respondents (23.4%) who said Moderately true and 15 respondents (14%) who said Completely true. However, 11 respondents (10.3%) felt the statement is Slightly true and 12 respondents (11.2%) said Not at all true. This indicates that most respondents believe export and import documentation is handled properly, but a noticeable percentage of respondents still experience documentation delays or errors, suggesting that the company can further improve documentation accuracy and processing time.

FIGURE 4.1.29

29. ACCURACY AND TIMELINESS OF DOCUMENTATION PROCESS

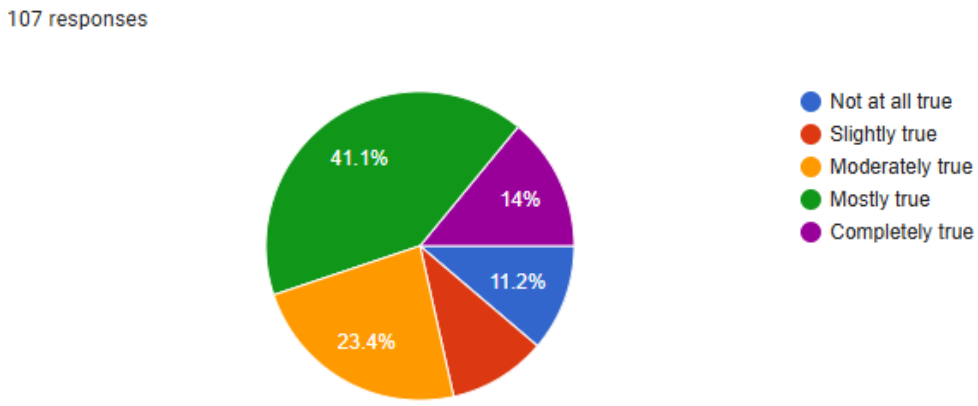

TABLE 4.1.30

30. OVERALL JOB SATISFACTION

S.NO	Particulars	Frequency	Percentage
1	Very unsatisfied	8	7.5
2	Unsatisfied	17	15.9
3	Neutral	27	25.2
4	Satisfied	40	37.4
5	Highly Satisfied	15	14
	Total	107	100

INTERPRETATION

The table shows respondents' overall satisfaction with working at Sasha Shipping Private Limited. Out of 107 respondents, the majority, 40 respondents (37.4%), reported that they are Satisfied with the organization. This is followed by 27 respondents (25.2%) who are Neutral and 15 respondents (14%) who are Highly Satisfied. However, 17 respondents (15.9%) are Unsatisfied and 8 respondents (7.5%) are Very Unsatisfied. This indicates that most respondents are generally satisfied working at the company, but a noticeable percentage of respondents are not fully satisfied, suggesting that the company can take steps to improve employee satisfaction and workplace conditions.

FIGURE 4.1.30

30. OVERALL JOB SATISFACTION

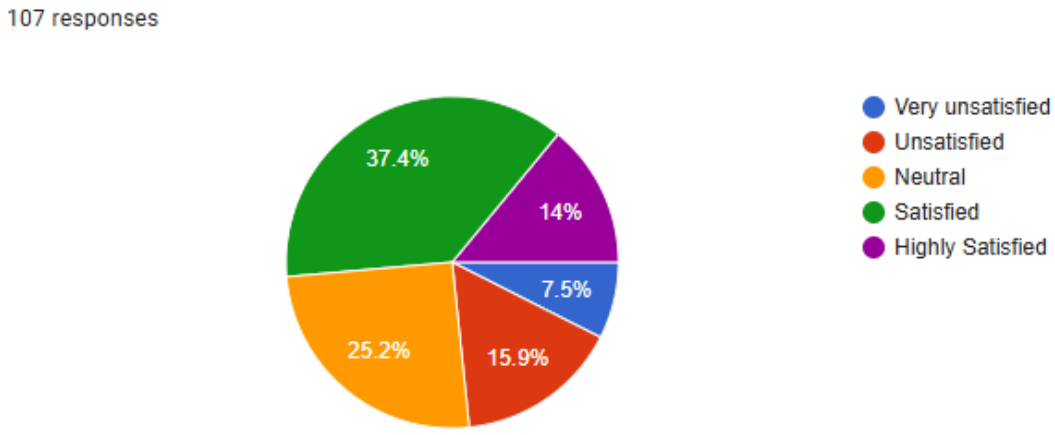

TABLE 4.1.31

31. WILLINGNESS TO RECOMMEND THE ORGANIZATION

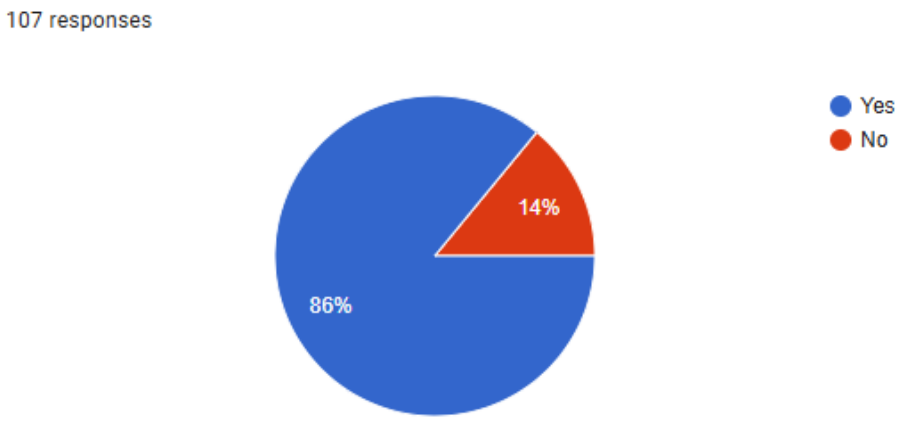

S.NO	Particulars	Frequency	Percentage
1	Yes	92	86
2	No	15	14
	Total	107	100

INTERPRETATION

The table shows whether respondents would recommend Sasha Shipping Private Limited as a good workplace. Out of 107 respondents, the majority, 92 respondents (86%), stated that they would recommend the company as a good workplace, while only 15 respondents (14%) said they would not recommend it. This indicates that most employees have a positive perception of the organization and are willing to recommend it to others, which reflects overall employee satisfaction and a favorable working environment in the company.

FIGURE 4.1.31

31. WILLINGNESS TO RECOMMEND THE ORGANIZATION

4.2 WEIGHTED AVERAGE METHOD

TABLE 4.2.1

1. EFFICIENCY OF IMPORT PROCESS

S.NO	Particulars	Frequency (f)	Weight (w)	f * w
1	Very Poor	10	1	10
2	Poor	9	2	18
3	Average	36	3	108
4	Good	45	4	180
5	Excellent	7	5	35
	Σ	**107**	**15**	**351**

Weighted Mean = $\Sigma(f \times w) / \Sigma f$

Weighted Mean = 351 / 107 = 3.28

INTERPRETATION

The weighted mean score of **3.28** indicates that the import process efficiency is moderately good among the respondents. Most responses are concentrated between the "Average" and "Good" categories, reflecting satisfactory performance. However, a few lower ratings indicate delays and coordination issues in certain stages of the process. This suggests that while the system is functional, it is not fully optimized across all operations. Improving workflow efficiency and reducing delays can enhance overall performance.

TABLE 4.2.2

2. TIMELINESS OF FREIGHT FORWARDING OPERATIONS

S.NO	Particulars	Frequency (f)	Weight (w)	f * w
1	Very Poor	11	1	11
2	Poor	11	2	22
3	Average	29	3	87
4	Good	41	4	164
5	Excellent	15	5	75
	Σ	**107**	**15**	**359**

Weighted Mean = $\Sigma(f \times w) / \Sigma f$

Weighted Mean = 359 / 107 = 3.36

INTERPRETATION

The weighted mean score of **3.36** shows that freight forwarding timelines are generally well maintained by the organization. A majority of respondents rated it as "Good" and "Excellent," indicating timely delivery of shipments. However, some lower ratings highlight occasional delays in operations. This suggests that performance is consistent but not completely reliable in all situations. Strengthening planning and monitoring systems can improve consistency further

TABLE 4.2.3

3. ACCURACY OF REAL-TIME SHIPMENT TRACKING

S.NO	Particulars	Frequency (f)	Weight (w)	f * w
1	Very Poor	14	1	14
2	Poor	17	2	34
3	Average	19	3	57
4	Good	38	4	152
5	Excellent	19	5	95
	Σ	**107**	**15**	**352**

Weighted Mean = $\Sigma(f \times w) / \Sigma f$

Weighted Mean = 352 / 107 = 3.29

INTERPRETATION

The weighted mean score of **3.29** indicates that shipment tracking is moderately effective and reliable. Most responses fall between "Average" and "Good," showing acceptable system performance. However, some employees experience issues with real-time tracking and accuracy. This suggests that the system is useful but lacks full efficiency in certain situations. Enhancing tracking technology can improve reliability and transparency.

TABLE 4.2.4

4. EFFICIENCY OF FREIGHT HANDLING SYSTEM

S.NO	Particulars	Frequency (f)	Weight (w)	f * w
1	Very Poor	13	1	13
2	Poor	10	2	20
3	Average	22	3	66
4	Good	44	4	176
5	Excellent	18	5	90
	Σ	**107**	**15**	**365**

Weighted Mean = $\Sigma(f \times w) / \Sigma f$

Weighted Mean = 365 / 107 = 3.41

INTERPRETATION

The weighted mean score of **3.41** reflects that the freight handling system is functioning efficiently. Most respondents rated it as "Good" and "Excellent," indicating smooth cargo handling operations. However, a few lower ratings suggest minor inefficiencies in handling processes. This shows that the system is effective but still has room for improvement. Continuous monitoring and process improvement can enhance performance.

TABLE 4.2.5

5. CLARITY AND IMPLEMENTATION OF SOPs

S.NO	Particulars	Frequency (f)	Weight (w)	f * w
1	Very Poor	14	1	14
2	Poor	10	2	20
3	Average	28	3	84
4	Good	42	4	168
5	Excellent	13	5	65
	Σ	**107**	**15**	**351**

Weighted Mean = $\Sigma(f \times w) / \Sigma f$

Weighted Mean = 351 / 107 = 3.28

INTERPRETATION

The weighted mean score of **3.28** indicates that SOP implementation is moderately effective in the organization. Most responses are between "Average" and "Good," showing basic adherence to procedures. However, inconsistencies in following SOPs are still observed among employees. This suggests that procedures are known but not strictly followed at all times. Regular training and monitoring can improve compliance.

TABLE 4.2.6

6. ADEQUACY OF WAREHOUSE STORAGE FACILITIES

S.NO	Particulars	Frequency (f)	Weight (w)	f * w
1	Very Poor	8	1	8
2	Poor	17	2	34
3	Average	15	3	45
4	Good	49	4	196
5	Excellent	18	5	90
	Σ	**107**	**15**	**373**

Weighted Mean = $\Sigma(f \times w) / \Sigma f$

Weighted Mean = 373 / 107 = 3.49

INTERPRETATION

The weighted mean score of **3.49** indicates high satisfaction with storage facilities. Most respondents rated it as "Good" and "Excellent," reflecting strong infrastructure support. However, a few lower ratings indicate minor issues in storage management. This suggests that facilities are adequate and efficient for operations. Further improvements can make the system more effective.

TABLE 4.2.7

7. COMPLIANCE WITH INTERNATIONAL FREIGHT REGULATIONS

S.NO	Particulars	Frequency (f)	Weight (w)	f * w
1	Very Poor	9	1	9
2	Poor	12	2	24
3	Average	37	3	111
4	Good	33	4	132
5	Excellent	16	5	80
	Σ	**107**	**15**	**356**

Weighted Mean = $\Sigma(f \times w) / \Sigma f$

Weighted Mean = 356 / 107 = 3.33

INTERPRETATION

The weighted mean score of **3.33** shows that compliance management is moderately effective. Most responses fall between "Average" and "Good," indicating acceptable regulatory adherence. However, some employees face challenges in handling compliance procedures. This suggests that the system works but needs improvement. Better training and system support can enhance compliance efficiency.

TABLE 4.2.8

8. COORDINATION BETWEEN FREIGHT AND WAREHOUSE TEAMS

S.NO	Particulars	Frequency (f)	Weight (w)	f * w
1	Very Poor	8	1	8
2	Poor	16	2	32
3	Average	33	3	99
4	Good	36	4	144
5	Excellent	14	5	70
	Σ	**107**	**15**	**353**

Weighted Mean = $\Sigma(f \times w) / \Sigma f$

Weighted Mean = 353 / 107 = 3.30

INTERPRETATION

The weighted mean score of **3.30** indicates that coordination between departments is average to good. Most responses are between "Average" and "Good," showing acceptable teamwork. However, some employees report communication gaps in operations. This suggests that coordination is functional but not fully efficient. Improving communication can enhance workflow.

TABLE 4.2.9

9. AVAILABILITY AND MODERNITY OF WAREHOUSE EQUIPMENT

S.NO	Particulars	Frequency (f)	Weight (w)	f * w
1	Very Poor	9	1	9
2	Poor	8	2	16
3	Average	21	3	63
4	Good	45	4	180
5	Excellent	24	5	96
	Σ	**107**	**15**	**364**

Weighted Mean = $\Sigma(f \times w) / \Sigma f$

Weighted Mean = 364 / 107 = 3.40

INTERPRETATION

The weighted mean score of **3.40** indicates that warehouse tools and equipment are good and functional. Most responses are positive, showing satisfaction with available resources. However, minor issues such as maintenance problems still exist. This suggests that infrastructure is reliable overall. Regular upgrades can improve efficiency further.

TABLE 4.2.10

10. EFFECTIVENESS OF INTERNAL TEAM COMMUNICATION

S.NO	Particulars	Frequency (f)	Weight (w)	f * w
1	Never	8	1	8
2	Rarely	14	2	28
3	Sometimes	21	3	63
4	Often	47	4	188
5	Always	17	5	85
	Σ	**107**	**15**	**372**

Weighted Mean = $\Sigma(f \times w) / \Sigma f$

Weighted Mean = 372 / 107 = 3.48

INTERPRETATION

The weighted mean score of **3.48** indicates strong communication within teams. Most responses are "Often" and "Always," showing frequent interaction. However, some inconsistencies still exist in communication. This suggests that teamwork is effective but can be improved. Enhancing clarity can strengthen collaboration.

TABLE 4.2.11

11. EFFECTIVENESS OF IT SYSTEMS FOR TRACKING OPERATIONS

S.NO	Particulars	Frequency (f)	Weight (w)	f * w
1	Never	11	1	11
2	Rarely	10	2	20
3	Sometimes	26	3	78
4	Often	42	4	168
5	Always	18	5	90
	Σ	**107**	**15**	**367**

Weighted Mean = $\Sigma(f \times w) / \Sigma f$

Weighted Mean = 367 / 107 = 3.43

INTERPERTATION

The weighted mean score of **3.43** indicates that IT systems provide reliable support. Most responses are positive, showing system usefulness in operations. However, some employees face minor technical issues. This suggests that systems are functional but not fully efficient. Upgrading systems can improve performance.

TABLE 4.2.12

12. TIMELINESS OF SHIPMENT STATUS UPDATES

S.NO	Particulars	Frequency (f)	Weight (w)	f * w
1	Never	6	1	6
2	Rarely	15	2	30
3	Sometimes	24	3	72
4	Often	47	4	188
5	Always	15	5	75
	Σ	**107**	**15**	**371**

Weighted Mean = $\Sigma(f \times w) / \Sigma f$

Weighted Mean = 371 / 107 = 3.47

INTERPERTATION

The weighted mean score of **3.47** indicates that shipment updates are regularly provided. Most responses are positive, showing effective communication. However, occasional delays in updates are reported. This suggests that the system is strong but improvable. Real-time updates can enhance efficiency.

TABLE 4.2.13

13. INTERDEPARTMENTAL COORDINATION EFFICIENCY

S.NO	Particulars	Frequency (f)	Weight (w)	f * w
1	Never	8	1	8
2	Rarely	11	2	22
3	Sometimes	21	3	63
4	Often	46	4	184
5	Always	21	5	105
	Σ	**107**	**15**	**382**

Weighted Mean = $\Sigma(f \times w) / \Sigma f$

Weighted Mean = 382 / 107 = 3.57

INTERPRETATION

The weighted mean score of **3.57** indicates strong coordination across departments. Most responses are highly positive, showing effective teamwork. However, a few minor issues are still present. This suggests smooth workflow within the organization. Maintaining consistency will sustain performance.

TABLE 4.2.14

14. SATISFACTION WITH JOB ROLE AND RESPONSIBILITIES

S.NO	Particulars	Frequency (f)	Weight (w)	f * w
1	Very Dissatisfied	8	1	8
2	Dissatisfied	9	2	18
3	Neutral	27	3	81
4	Satisfied	44	4	176
5	Very Satisfied	19	5	95
	Σ	**107**	**15**	**378**

Weighted Mean = $\Sigma(f \times w) / \Sigma f$

Weighted Mean = 378 / 107 = 3.53

INTERPRETATION

The weighted mean score of **3.53** indicates good job satisfaction among employees. Most responses are "Satisfied" and "Very Satisfied," reflecting a positive environment. However, some neutral responses still exist. This suggests satisfaction is high but not complete. Improvements can enhance morale.

TABLE 4.2.15

15. MANAGEMENT COMMUNICATION AND TRANSPARENCY

S.NO	Particulars	Frequency (f)	Weight (w)	f * w
1	Very Dissatisfied	10	1	10
2	Dissatisfied	6	2	12
3	Neutral	21	3	63
4	Satisfied	47	4	188
5	Very Satisfied	23	5	115
	Σ	**107**	**15**	**388**

Weighted Mean = $\Sigma(f \times w) / \Sigma f$

Weighted Mean = 388 / 107 = 3.63

INTERPRETATION

The weighted mean score of **3.63** indicates high satisfaction with management communication. Most responses are positive, showing transparency and support. However, minor concerns still exist among employees. This suggests strong leadership communication. Maintaining this can improve trust further.

TABLE 4.2.16

16. IMPACT OF DOCUMENTATION ERRORS ON OPERATIONS

S.NO	Particulars	Frequency (f)	Weight (w)	f * w
1	Very Dissatisfied	7	1	7
2	Dissatisfied	10	2	20
3	Neutral	23	3	69
4	Satisfied	48	4	192
5	Very Satisfied	19	5	95
	Σ	**107**	**15**	**383**

Weighted Mean = $\Sigma(f \times w) / \Sigma f$

Weighted Mean = 383 / 107 = 3.58

INTERPRETATION

The weighted mean score of **3.58** indicates minimal documentation errors. Most responses are positive, showing efficient processes. However, occasional mistakes still occur in operations. This suggests the system is reliable overall. Automation can further reduce errors.

TABLE 4.2.17

17. SATISFACTION WITH COMPENSATION AND BENEFITS

S.NO	Particulars	Frequency (f)	Weight (w)	f * w
1	Very Dissatisfied	5	1	5
2	Dissatisfied	11	2	22
3	Neutral	14	3	42
4	Satisfied	58	4	232
5	Very Satisfied	19	5	95
	Σ	**107**	**15**	**396**

Weighted Mean = $\Sigma(f \times w) / \Sigma f$

Weighted Mean = 396 / 107 = 3.70

INTERPRETATION

The weighted mean score of **3.70** indicates very high satisfaction with salary. Most responses are highly positive from employees. This shows compensation is a strong motivating factor. Very few negative responses are recorded. Maintaining this will improve retention.

TABLE 4.2.18

18. EFFECTIVENESS OF WAREHOUSE SAFETY MEASURES

S.NO	Particulars	Frequency (f)	Weight (w)	f * w
1	Very Dissatisfied	8	1	8
2	Dissatisfied	11	2	22
3	Neutral	21	3	63
4	Satisfied	43	4	172
5	Very Satisfied	24	5	120
	Σ	**107**	**15**	**385**

Weighted Mean = $\Sigma(f \times w) / \Sigma f$

Weighted Mean = 385 / 107 = 3.60

INTERPRETATION

The weighted mean score of **3.60** indicates strong safety measures in the organization. Most responses are positive, showing a safe working environment. However, minor improvements are still possible. This suggests safety is well managed. Continuous monitoring can sustain standards.

TABLE 4.2.19

19. RELIABILITY OF TRANSPORT PARTNERS

S.NO	Particulars	Frequency (f)	Weight (w)	f * w
1	Very Dissatisfied	10	1	10
2	Dissatisfied	10	2	20
3	Neutral	20	3	60
4	Satisfied	43	4	172
5	Very Satisfied	24	5	120
	Σ	**107**	**15**	**382**

Weighted Mean = $\Sigma(f \times w) / \Sigma f$

Weighted Mean = 382 / 107 = 3.57

INTERPRETATION

The weighted mean score of **3.57** indicates reliable transport partners. Most responses are positive, showing good service support. However, minor inconsistencies are observed. This suggests external coordination is effective. Monitoring can improve performance further.

TABLE 4.2.20

20. EMPLOYEE RECOGNITION AND APPRECIATION

S.NO	Particulars	Frequency (f)	Weight (w)	f * w
1	Very Dissatisfied	11	1	11
2	Dissatisfied	9	2	18
3	Neutral	23	3	69
4	Satisfied	46	4	184
5	Very Satisfied	18	5	90
	Σ	**107**	**15**	**372**

Weighted Mean = $\Sigma(f \times w) / \Sigma f$

Weighted Mean = 372 / 107 = 3.48

INTERPRETATION

The weighted mean score of **3.48** indicates moderate employee recognition. Most responses are positive, but some dissatisfaction exists. This suggests recognition is not fully effective. Employees expect more appreciation. Improving rewards can boost morale.

TABLE 4.2.21

21. ACHIEVABILITY OF FREIGHT FORWARDING TARGETS

S.NO	Particulars	Frequency (f)	Weight (w)	f * w
1	Not at all true	7	1	7
2	Slightly true	13	2	26
3	Moderately true	18	3	54
4	Mostly true	43	4	172
5	Completely true	26	5	130
	Σ	**107**	**15**	**389**

Weighted Mean = $\Sigma(f \times w) / \Sigma f$

Weighted Mean = 389 / 107 = 3.64

INTERPRETATION

The weighted mean score of **3.64** indicates achievable freight targets. Most responses are positive, showing effective planning. Only minor concerns are reported. This suggests goals are realistic and clear. Maintaining this supports performance.

TABLE 4.2.22

22. TRANSPARENCY AND ACCURACY IN BILLING PROCESS

S.NO	Particulars	Frequency (f)	Weight (w)	f * w
1	Not at all true	7	1	7
2	Slightly true	12	2	24
3	Moderately true	22	3	66
4	Mostly true	49	4	196
5	Completely true	17	5	85
	Σ	**107**	**15**	**378**

Weighted Mean = $\Sigma(f \times w) / \Sigma f$

Weighted Mean = 378 / 107 = 3.53

INTERPRETATION

The weighted mean score of **3.53** indicates transparent billing processes. Most responses are positive, showing trust among employees. However, minor clarity issues still exist. This suggests processes are reliable. Improvements can enhance understanding.

.

TABLE 4.2.23

23. ADEQUACY OF TRAINING ON FREIGHT REGULATIONS

S.NO	Particulars	Frequency (f)	Weight (w)	f * w
1	Not at all true	13	1	13
2	Slightly true	10	2	20
3	Moderately true	25	3	75
4	Mostly true	45	4	180
5	Completely true	14	5	70
	Σ	**107**	**15**	**358**

Weighted Mean = $\Sigma(f \times w) / \Sigma f$

Weighted Mean = 358 / 107 = 3.46

INTERPRETATION

The weighted mean score of **3.46** indicates adequate training programs. Most responses are positive, but improvements are needed. This suggests training is sufficient but not strong. Employees expect better development opportunities. Increasing training can improve skills.

TABLE 4.2.24

24. CLARITY OF JOB RESPONSIBILITIES IN FREIGHT PROCESS

S.NO	Particulars	Frequency (f)	Weight (w)	f * w
1	Not at all true	10	1	10
2	Slightly true	10	2	20
3	Moderately true	27	3	81
4	Mostly true	36	4	144
5	Slightly true	24	5	120
	Σ	**107**	**15**	**375**

Weighted Mean = $\Sigma(f \times w) / \Sigma f$

Weighted Mean = 375 / 107 = 3.50

INTERPRETATION

The weighted mean score of **3.50** indicates clear job responsibilities. Most responses are positive, showing good understanding. However, slight confusion still exists among employees. This suggests roles are mostly defined. Better clarity can improve efficiency.

TABLE 4.2.25

25. ACCURACY AND TIMELINESS OF DOCUMENTATION PROCESS

S.NO	Particulars	Frequency (f)	Weight (w)	f * w
1	Not at all true	12	1	12
2	Slightly true	11	2	22
3	Moderately true	25	3	75
4	Mostly true	44	4	176
5	Completely true	15	5	75
	Σ	**107**	**15**	**360**

Weighted Mean = $\Sigma(f \times w) / \Sigma f$

Weighted Mean = 360 / 107 = 3.36

INTERPRETATION

The weighted mean score of **3.36** indicates good documentation accuracy. Most responses are positive, but some errors still exist. This suggests performance is acceptable. However, improvements are required. Better systems can increase reliability.

TABLE 4.2.26

26. OVERALL JOB SATISFACTION

S.NO	Particulars	Frequency (f)	Weight (w)	f * w
1	Very unsatisfied	8	1	8
2	Unsatisfied	17	2	34
3	Neutral	27	3	81
4	Satisfied	40	4	160
5	Highly Satisfied	15	5	75
	Σ	**107**	**15**	**358**

Weighted Mean = $\Sigma(f \times w) / \Sigma f$

Weighted Mean = 358 / 107 = 3.35

INTERPRETATION

The weighted mean score of **3.35** indicates moderate overall satisfaction. Most responses are positive but not very strong. This suggests overall performance is good. However, improvements are still needed. Enhancing key areas can increase satisfaction.

TABLE 4.2.27

27. WILLINGNESS TO RECOMMEND THE ORGANIZATION

S.NO	Particulars	Frequency (f)	Weight (w)	f * w
1	Yes	92	1	92
2	No	15	2	30
	Σ	**107**	**3**	**122**

Weighted Mean = $\Sigma(f \times w) / \Sigma f$

Weighted Mean = 122 / 107 = 1.65

INTERPRETATION

The weighted mean score of **1.65** indicates strong recommendation from employees. Most respondents selected "Yes" as their answer. This shows a positive company image. Only a few negative responses exist. This reflects strong employee perception.

4.3 CHI SQUARE TEST

RELATIONSHIP BETWEEN AGE OF RESPONDENTS AND OVERALL SATISFACTION

H_0 (Null Hypothesis): There is no significant relationship between age of the respondents and overall satisfaction.

H_1 (Alternative Hypothesis): There is a significant relationship between age of the respondents and overall satisfaction.

Level of significance at 5%

TABLE 4.3.1

Case Processing Summary

	Cases					
	Valid		Missing		Total	
	N	Percent	N	Percent	N	Percent
Age * Employee Overall Satisfaction	107	100.0%	0	0.0%	107	100.0%

TABLE 4.3.2

Age * Employee Overall Satisfaction Crosstabulation

Count

		Employee Overall Satisfaction					
		Highly Satisfied	Neutral	Satisfied	Unsatisfied	Very unsatisfied	Total
Age	25 - 34	4	8	13	8	0	33
	35 - 44	5	8	21	4	3	41
	45 and above	4	4	4	2	0	14
	Below 25	2	7	2	3	5	19
	Total	15	27	40	17	8	107

TABLE 4.3.3

Chi-Square Tests

	Value	df	Asymp. Sig. (2-sided)
Pearson Chi-Square	25.153[a]	12	.014
Likelihood Ratio	25.750	12	.012
N of Valid Cases	107		

a. 11 cells (55.0%) have expected count less than 5. The minimum expected count is 1.05.

INTERPRETATION

The Chi-Square test reveals that the p-value (0.014) is less than the 0.05 level of significance, leading to the rejection of the null hypothesis and confirming a significant relationship between age and overall satisfaction. The crosstabulation indicates that respondents aged 35–44 show higher satisfaction levels, while those below 25 years exhibit comparatively higher dissatisfaction. Other age groups demonstrate moderate levels of satisfaction. However, as a considerable number of cells have expected counts less than 5, the findings should be interpreted with some caution, even though the overall result remains statistically significant.

4.4 CORRELATION

RELATIONSHIP BETWEEN SALARY SATISFACTION OF THE RESPONDENTS AND EMPLOYEE OVERALL SATISFACTION

Hypothesis for Correlation:

H_0 (Null Hypothesis): There is no significant relationship between salary satisfaction and employee overall satisfaction.

H_1 (Alternative Hypothesis): There is a significant relationship between salary satisfaction and employee overall satisfaction.

TABLE 4.4.1

Correlations

		Salary	Employee Overall Satisfaction
Salary	Pearson Correlation	1	.695**
	Sig. (2-tailed)		.000
	N	107	107
Employee Overall Satisfaction	Pearson Correlation	.695**	1
	Sig. (2-tailed)	.000	
	N	107	107

**. Correlation is significant at the 0.01 level (2-tailed).

INTERPRETATION

The correlation analysis shows a Pearson correlation value of 0.695, indicating a strong positive relationship between salary satisfaction and overall employee satisfaction. The significance value (p = 0.000) is less than 0.01, so the null hypothesis is rejected and the alternative hypothesis is accepted. This means that there is a statistically significant relationship between salary satisfaction and overall satisfaction. It implies that as employees' satisfaction with their salary increases, their overall satisfaction with the organization also increases significantly.

4.5 ANOVA (ANALYSIS OF VARIANCE)

RELATIONSHIP BETWEEN CURRENT JOB ROLE OF THE RESPONDENTS AND EMPLOYEE OVERALL SATISFACTION

H_0 (Null Hypothesis): There is no significant difference in employee overall satisfaction with current job role.

H_1 (Alternative Hypothesis): There is a significant difference in employee overall satisfaction with current job role.

TABLE 4.5.1

	Documentation Staff	.938	.398	.137	-.17	2.04
	Warehouse Operation Staff	.152	.332	.991	-.77	1.07
	Supervisor / Manager	-.060	.363	1.000	-1.07	.95

***. The mean difference is significant at the 0.05 level.**

TABLE 4.5.3

Homogeneous Subsets

Employee Overall Satisfaction

Tukey HSD[a,b]

Current job role	N	Subset for alpha = 0.05	
		1	2
Documentation Staff	16	2.56	
Warehouse Operation Staff	46	3.35	3.35
Others	14	3.50	3.50
Supervisor / Manager	25	3.56	3.56
Freight Forwarding Executive	6		4.17
Sig.		.122	.285

Means for groups in homogeneous subsets are displayed.

a. Uses Harmonic Mean Sample Size = 13.799.

b. The group sizes are unequal. The harmonic mean of the group sizes is used. Type I error levels are not guaranteed.

INTERPRETATION

The ANOVA test shows a significance value ($p = 0.015$) which is less than 0.05, so the null hypothesis is rejected, indicating a significant difference in overall satisfaction based on current job role. This means that employees in different job roles experience different levels of satisfaction. The Post Hoc (Tukey HSD) test further reveals that Freight Forwarding Executives have significantly higher satisfaction compared to Documentation Staff, and Documentation Staff have lower satisfaction compared to Supervisors/Managers. Other job role comparisons do not show significant differences. Overall, the results indicate that job role has a notable impact on employee satisfaction levels, although some group differences are not statistically significant

CHAPTER V

CHAPTER V
FINDINGS, SUGGESTION AND CONCLUSION

5.1 FINDINGS

- The gender distribution indicates a male-dominated workforce, with more male employees than female employees.
- The majority of employees belong to the 35–44 age group, reflecting a mature workforce.
- A considerable number of employees fall under the 25–34 age group, indicating a strong mid-level employee presence.
- Fewer employees are below 25 years, indicating limited entry of younger workforce.
- Employees aged 45 and above form a smaller segment, representing limited senior workforce presence.
- Most respondents are engaged in warehouse operations, highlighting operational dominance.
- Supervisors and managers represent a moderate portion of the workforce.
- Documentation staff form a reasonable share, while freight forwarding executives are comparatively fewer.
- The majority of employees have moderate work experience, particularly between four to five years.
- A significant number of employees have one to three years of experience, contributing to workforce stability.
- Employees with more than five years of experience are fewer, indicating possible retention issues.
- The import process is generally rated as good to average, indicating acceptable efficiency levels.
- However, some respondents perceive the import process as inefficient, highlighting areas for improvement.
- Freight forwarding timelines are mostly rated as good, with some respondents rating

them as excellent.

- At the same time, certain respondents report poor performance in timelines, indicating delays.
- Shipment tracking is generally rated as good to excellent by many respondents.
- However, a considerable number of respondents experience issues, indicating reliability concerns in tracking.
- The freight handling system is largely rated as good, with some respondents rating it as excellent.
- Despite this, some respondents identify operational gaps in the handling system.
- Standard Operating Procedures are generally rated as good to average.
- However, some respondents indicate lack of clarity and effectiveness in SOP implementation.
- Warehouse storage facilities are generally rated as good, with some respondents rating them as excellent.
- At the same time, certain respondents express dissatisfaction, indicating infrastructure-related issues.
- Compliance with international freight regulations is perceived at an average to good level.
- However, some respondents indicate poor compliance, highlighting regulatory challenges.
- Coordination between freight forwarding and warehouse teams is generally rated as good to average.
- However, some respondents report poor coordination, indicating communication gaps.
- Communication within teams is often effective, but some employees report that it is rarely or never effective.
- Overall job satisfaction is moderate to high, with many employees satisfied or highly satisfied.
- However, a portion of employees remains dissatisfied, indicating scope for improvement.

5.2 SUGGESTION

- The organization should improve import and freight forwarding processes by reducing delays, simplifying documentation, and improving coordination with stakeholders. Efficient processes will reduce employee workload and stress, thereby enhancing overall job satisfaction.
- Freight timelines should be strictly maintained through proper planning and monitoring systems. Timely operations will reduce pressure on employees and help them perform their tasks more efficiently and comfortably.
- Shipment tracking systems should be upgraded to provide accurate and real-time updates. Reliable tracking will reduce confusion, improve work clarity, and increase employee confidence in handling operations.
- Standard Operating Procedures (SOPs) should be clearly defined, regularly updated, and properly communicated to all employees. Clear guidelines will eliminate confusion in job roles and improve employee performance and satisfaction.
- Coordination between freight forwarding and warehouse teams should be strengthened. Better coordination will reduce communication gaps, avoid operational delays, and create a smoother work environment for employees.
- Warehouse infrastructure and storage facilities should be improved to ensure a comfortable and efficient working environment. Better facilities will reduce physical strain and increase employee satisfaction.
- IT systems should be upgraded and integrated to support logistics operations effectively. Improved systems will reduce manual errors, simplify tasks, and enhance employee productivity and satisfaction.
- Safety measures should be strengthened by providing proper safety equipment, training, and guidelines. A safe working environment will increase employee confidence and ensure their well-being.
- Employee motivation should be improved through recognition programs, fair performance appraisal systems, and career growth opportunities. This will enhance employee morale, engagement, and long-term commitment to the organization.

5.3 SCOPE OF FUTURE RESEARCH

The present study is limited to employee satisfaction in freight forwarding and warehousing operations at Sasha Shipping Private Limited, Tuticorin, and is based on a specific sample and time period. Therefore, there is considerable scope for further research to expand and deepen the understanding of this topic.

Future studies can be extended to include multiple logistics companies across different regions to provide a comparative analysis and broader generalization of results. Researchers can also examine other departments such as transportation, customer service, and documentation to understand employee satisfaction across the entire supply chain. Further research may focus on the impact of advanced technologies such as automation, artificial intelligence, and digital tracking systems on employee satisfaction and job performance. A longitudinal study can also be conducted to analyze changes in employee satisfaction over time and measure the effectiveness of implemented improvements. Additionally, future studies can explore the relationship between employee satisfaction and customer satisfaction, as well as its direct impact on organizational profitability and service quality. Researchers may also investigate specific factors such as work-life balance, leadership styles, training effectiveness, and employee engagement practices in greater detail.

Moreover, expanding the sample size and adopting advanced statistical tools can provide more accurate and in-depth insights. Comparative studies between organized and unorganized logistics sectors or between domestic and international logistics firms can also offer valuable findings.

Overall, future research can build upon this study by covering a wider scope, incorporating new variables, and providing deeper insights into improving both employee well-being and operational efficiency in the logistics industry.

5.4 CONCLUSION

The present study on employee satisfaction in freight forwarding and warehousing at Sasha Shipping Private Limited, Tuticorin, reveals that the overall level of employee satisfaction is moderate to high, with employees generally satisfied with their job roles, working conditions, and operational systems. However, the study also identifies certain areas such as shipment tracking, freight timelines, communication, and process efficiency where improvements are required. These factors influence employee workload, stress levels, and overall job satisfaction, highlighting the need for better operational and management practices.

In conclusion, employee satisfaction plays a crucial role in enhancing productivity, efficiency, and service quality in logistics operations. By improving operational processes, strengthening communication, adopting advanced technologies, and focusing on employee welfare measures such as training, recognition, and career development, the organization can create a more positive and supportive work environment. A satisfied workforce will contribute significantly to organizational growth, improved performance, and long-term success in the competitive logistics industry.
